(a) Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
(b) High rpd due to possible sample nonhomogeneity.
(c) Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

RIDGEWOOD SOIL GRID SAMPLING

VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JD91204 DATED JULY 31, 2024

INTRODUCTION

Matrix New World Engineering (Matrix) collected 17 soil samples and two aqueous field blanks on June 26, 2024. Samples were relinquished to an SGS Laboratory courier, and then transported to SGS Laboratory, located in Dayton, New Jersey on the day of sampling. Sample identifications and requested analyses are listed below.

Samples were received under proper chain of custody in two coolers and were properly chilled at temperatures of 2.6 and 3.0 degrees Celsius. Quality Control for the soil samples is evaluated in the following checklist tables and comments. A summary of data quality for the samples analyzed is provided at the end of this validation report.

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) The soil samples were extracted on June 30, 2024 within the required 14-day holding time. SVOC analyses were performed by July 2, 2024 within the 40 day holding time after extraction. Extraction and analysis holding times were met.

2) Sample GRID-18 was diluted by a factor five times to quantify fluoranthene and pyrene. No other sample dilutions were required for analysis of SVOCs. Several SVOCs were detected in soil samples at concentrations between the method detection limit (MDL) and the reporting limit. **Due to limited accuracy in this portion of the calibration range these SVOCs results are qualified as J/Estimated, as noted in the following pages:**

3) SGS provided results from one full suite solid matrix method blank in support of the SVOC analyses. No SVOCs were detected in the method blank. Results from an aqueous method blank were also provided with no SVOCs detected

Results from two aqueous field blanks were provided. No SVOCs were detected in the field blanks.

4-5) SGS provided results from one full set of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the SVOC analyses. All LCS recoveries were within laboratory specified control limits, ranging from 24 to 101 percent. Accuracy, as demonstrated by these analyses is acceptable.

One set of aqueous LCS and LCS duplicate analyses were provided in support of the field blanks. Precision and accuracy, as demonstrated by these analyses is acceptable.

6-7) SGS provided results from one set of project specific (spike on sample GRID-26) matrix spike (MS) and MSD duplicate analyses in support of the SVOC analyses. MS and MSD recoveries ranged from 0 to 135 percent (various control limits). The maximum RPD between MS and MSD results was 40 percent. Precision and accuracy, as demonstrated by these analyses is acceptable, with the following exceptions where MS and MSD results were low.

SVOC	**Low MS / MSD % recoveries**
2,4-Dinitrophenol	0 / 0
4,6-Dinitro-o-cresol	5 / 5
Hexachlorocyclopentadiene	4 / 4

No action is taken based solely on the low MS and MSD recoveries in the project spikes unless additional quality control issues for these SVOCs are noted.

8) Six surrogates were spiked into each soil sample in support of the SVOC analyses. Surrogate recoveries were acceptable, ranging from 17 to 78 percent (various control limits with low limits of 10-11 percent). Accuracy, as demonstrated by these analyses is acceptable.

9) Field duplicate samples were not submitted with the samples under this chain of custody in support of the SVOC analyses.

10) No anomalies were noted with respect to results SVOC quantitation or reporting. SGS noted that CCV recoveries were high for some SVOCs that were not detected in the associated samples. No bias to the sample results is indicated by the high CCVs. SGS noted that CCV recoveries were low for some SVOCs that were not detected in the associated samples. These SVOCs included the following:

4-Nitrophenol Pentachlorophenol Hexachlorocyclopentadiene

SGS stated that a low level standard was analyzed to show that these SVOCs could be detected at reporting limits. Results for these standards were not provided.

Numerous Tentatively Identified Compounds (TICs) were reported with each sample analyzed for SVOCs. **Results for TICs are considered to be estimated in magnitude. In some cases, the identification of the TIC was verified against the library of SVOCs compounds associated with the method.**

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) The soil samples for analysis of pesticides were extracted on June 29, 2024 within the required 14-day holding time. Pesticide analyses were performed by July 2, 2024 within the 40-day holding time after extraction.

2) Some samples were analyzed at dilutions to quantify specific pesticides as follows:

Sample ID	**Pesticide Dilutions**
GRID-28	10 times for 4,4-DDT and 4,4-DDE
GRID-17	10 times for gamma-Chlordane and Chlordane
GRID-2	20 times for 4,4-DDT and 4,4-DDE

No other samples were analyzed at dilutions to quantify pesticides. Several pesticides were detected in soil samples at concentrations between the method detection limit (MDL) and the reporting limit. **Due to limited accuracy in this portion of the calibration range these pesticide results are qualified as J/Estimated, as follows:**

Sample ID	Qualified Pesticides (ug/kg)

3) SGS provided results from one full suite solid matrix method blank in support of the pesticide analyses. One aqueous method blank was also provided. No pesticides were detected in the method blanks:

Two aqueous field blanks was analyzed with the soil samples. No pesticides were detected in the field blanks.

4-5) SGS provided results from one full set of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the pesticide analyses. All LCS recoveries were within laboratory specified control limits, ranging from 74 to 94 percent. Accuracy, as demonstrated by these analyses is acceptable. Some spike recoveries were reported from the 1st analytical signal, as drift for the CCV for the secondary signal exceeded 20 percent..

LCS and LCS duplicate results were provided in support of the aqueous analyses (field blank) with acceptable accuracy. Precision between LCS and LCSD analyses in support of the field blank analyses was poor for several pesticides with RPDs up to 6 percent above control limits. This does not impact the soil sample results.

6-7) SGS provided results from one set of project specific matrix spike (MS) and MS duplicate analyses in support of the pesticide analyses (spike on project sample GRID-26). MS and MSD recoveries ranged from -38 to 126 percent. The maximum RPD between MS and MSD result was 100 percent for Lindane. MS recoveries were low for several pesticides including the following:

Alpha-BHC delta-BHC Lindane 4,4-DDD 4,4-DDT
Endrin Aldehyde

MSD recoveries were acceptable and generally higher than the MS recoveries, resulting in poor precision. This may indicate significant sample heterogeneity in the sample spiked or a problem with the MS spike. In any case, matrix issues may be indicated, and the pesticide data for the above listed compounds may biased.

8) Two surrogates (tetrachloro-m-xylene (TCMX) and decachlorobiphenyl (DCBP)) were spiked into each soil sample in support of the solid matrix pesticide analyses. Surrogates were reported from each of the two columns used in the analyses, and from each dilution run as applicable. Surrogate recoveries ranged from 23 to 817 percent and were out of control for several samples for one or both surrogates, and for one or both dilution runs, as applicable. Recoveries for the DCBP surrogate were high (upper control limit of 154 percent) from one or both GC columns (**bolded** results) in numerous samples, as listed below. Some TCMX surrogate recoveries were also low as noted (lower control limit of 46 percent).

Sample ID	High DCBP rec % (low TCMX as noted)
GRID-26	66 / **443**
GRID-27	All in control
GRID-25	All in control
GRID-16	113 / **519**
GRID-28	76 **/ 193 / 421 / 817** (also TCMX low by 1%)
GRID-24B	**23** / 69 (TCMX low)

Sample ID	High DCBP rec % (low TCMX as noted)
GRID-17	**178** / 92 (also TCMX low by 3%)
GRID-14A	All in control
GRID-15	**207** / **805**
GRID-2	**602 / 236**
GRID-19	**378** / **189** (also TCMX low by 7%)
GRID-13	126 / **254**
GRID-1	All in control
GRID-18	49 / **420** (also TCMX low by 3%)
GRID-12A	All in control
GRID-22A	112 / **275** (also TCMX low by 5%)
GRID-12A	All in control

The evaluation of these surrogates is very complex, as different pesticides may be quantified from the two columns (signals). In cases with dilutions and high surrogates, there are multiple combinations of sample results for each pesticide, depending on the signal used. In cases with high DCBP and low TCMX surrogates, the situation is even more complex. The sample results must be reviewed in combination with the results footnotes and the "GC Identification Summaries" table provided in Section 8.7 of the SGS report to determine if each individual pesticide detection is associated with any bias.

There were no pesticide detections that exceeded project remediation standards, even though a high bias and possible matrix interference is indicated for the majority of the detections. The majority of detections are already qualified based on the reporting limit discussion in comment #2 of this validation, or due to poor dual column confirmation precision discussion below, in comment #11. Therefore, no further evaluation of the surrogates is provided here, unless a sample specific pesticide evaluation is requested.

9) Several sets of DDT/Endrin breakdown check standards were analyzed coinciding with each analytical batch. DDT and Endrin breakdown levels were all less than the QAPP specific level of 15 percent.

10) Field duplicate samples were not submitted with the samples under this chain of custody.

11) No anomalies were noted with respect to results pesticide quantitation or reporting, with the following exceptions. Numerous pesticides were flagged by SGS due to an RPD of more than 40% between the dual GC columns used for quantitation and confirmation. In many cases, the pesticides in question were already qualified as J/Estimated due to reporting limits and no further action is required. Many of these sample results would also be qualified in a detailed investigation of the surrogate recoveries. The following samples were not previously qualified and are qualified due to poor precision between pesticide detections on the dual columns.

1) The soil samples for analysis of Aroclors were extracted on June 29, 2024 within the required 14-day holding time. Aroclor analyses were performed by July 1, 2024, within the 40 day holding time after extraction. Extraction and analysis holding times were met.

2) No soil samples were analyzed at dilutions to quantitate any Aroclors. Several Aroclor detections were reported at concentrations between the MDL and RL. **Due to limited accuracy in this portion of the calibration range these Aroclor results are qualified as J/Estimated, as follows:**

Sample ID	**Qualified Aroclors (ug/kg)**
GRID-26	Aroclor 1260 = 8.6 *J*
GRID-16	Aroclor 1262 = 15.0 *J*
GRID-24A	Aroclor 1262 = 6.1 *J*

GRID-22A	Aroclor 1254 = 7.2 *J*
GRID-22A	Aroclor 1262 = 3.1 *J*

No other Aroclors were reported at concentrations between the MDL and RL. Aroclor reporting limits are determined to be acceptable.

3) SGS provided results from one full suite solid matrix method blank in support of the Aroclor analyses with no Aroclors detected. Results from two aqueous matrix field blanks and from one aqueous matrix method blank were provided with no PCBs detected.

4-5) SGS provided results from one set of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the Aroclor analyses. Aroclors 1016 and 1260 were spiked with acceptable recoveries of 83 and 89 percent. Accuracy, as demonstrated by these analyses is acceptable.

Results from one set of aqueous matrix set of LCS and LCSD spikes were provided in support of the field blanks, with LCS recoveries ranging from 85 to 115 percent. Precision and accuracy, as demonstrated by these analyses is acceptable.

6-7) SGS provided results from one set of project specific matrix spike (MS) and MSD duplicate analyses in support of the Aroclor analyses (spike on project sample GRID-27). MS spikes were performed on Aroclors 1016 and 1260. MS and MSD recoveries ranged from 82 to 84 percent and were within prescribed control limits. Precision between MS and MSD results was acceptable, with a maximum RPD of 2 percent.

8) Two surrogates (tetrachloro-m-xylene and decachlorobiphenyl) were spiked into each soil sample in support of the solid matrix Aroclor analyses. Surrogate recoveries were reported from both analytical columns and ranged from 78 to 93 percent. Accuracy, as demonstrated by these analyses is acceptable, with the following considerations.

. Recoveries for the decachlorobiphenyl surrogate were high (upper control limit of 154 percent) from one or both GC columns (**bolded** results) in one sample. **In cases where (see GC identification summaries) the high surrogate was reported, the results may be biased high, and the detected Aroclor results are qualified as J/Estimated, as listed below.**

Sample ID	DCBP % Rec	Qualified pesticides (mg/Kg)
GRID-19	**172 / 193**	Aroclor 1262 = 0.0117 *J*

9) Field duplicate samples were not submitted with the samples und this chain of custody.

10) No anomalies were noted with respect to Aroclor quantitation or reporting, with the following exceptions. Some Aroclors were flagged by SGS due to an RPD of more than 40% between the dual GC columns used for quantitation and confirmation. **Matrix interferences may impact precision between the two analytical columns. Due to the poor precision between columns, these Aroclors detections are qualified as J/Estimated, for the following samples.**

COMMENTS: Performance was acceptable, with the following exceptions and/or notes:

1) The soil samples for analysis of TAL metals were prepared by June 28, 2024 and were analyzed within the 6 month holding times by July 1, 2024 (within 28 days for mercury). Extraction and analysis holding times were met.

2) Sample Grid-1 was diluted by a factor of two times to quantitate iron, copper, and selenium. No other metal analyses were performed at dilutions. All metals results were reported to the RL. No metals detections were reported at concentrations between the MDL and RL. Reporting limits are determined to be acceptable.

3) Results from numerous sets of initial and continuing calibration blanks were provided in support of the TAL metals analyses. Results for these blanks were presented in aqueous units. No TAL metals were detected at concentrations exceeding the RL. Results from one set of solid matrix method blanks were also provided, with no metals detected at concentrations exceeding the RL.

   Result from two aqueous field blanks were provided with no metals detected.

4) Results from several sets of initial and continuing calibration analyses were provided for the TAL metals. All ICV and CCV standard recoveries were within control limits of 90-110 percent. Results from high end (typically 8,000 ug/L) calibration standards

were provided with acceptable recoveries between 90 and 110 percent for selected metals. Results from low end calibration standards (CRI) were also reported. CRI control limits are 80-120 percent (70-130 for mercury).

5) Results from several sets of ICP interference check samples were provided in support of the TAL metals. ICP interference check sample recoveries were acceptable, within control limits of 80-20 percent).

6-7) SGS provided results from one set of solid matrix project specific (spike on soil sample GRID-26) matrix spike (MS) and MSD duplicate analyses in support of the TAL metals analyses. MS and MSD recoveries are evaluated herein when the sample concentration in the native sample does not exceed the spike concentration by more than 4 times. MS and MSD control limits were 75 – 125 percent.

MS/MSD recoveries were out of control limits in the project spike as follows:

Metal spiked	MS / MSD Recovery %	Validation Action
Aluminum	**183.3 / 159.7**	High bias – J/Estimated
Antimony	**54.3 / 53.3**	Low bias – UJ/Estimated at RL
Manganese	108.5 / **69.0**	Low bias – J/Estimated

8) SGS provided results from one set of solid matrix LCS analyses in support of the TAL metals is soil samples. The LCS recoveries were acceptable ranging from 91.5 to 98.0 percent (control limits of 80-120 percent).

9) SGS provide results from one set of serial dilution analyses performed on project sample GRID-26. Percent differences between the initial result and the 5 times serial dilution result were less the control limit of 10 percent for all metals results where the initial result was greater than 50 times the instrument detection limit, with one exception. The serial dilution percent difference for chromium was high at 11.7 percent. **Due to poor serial dilution perchlorate, chromium results for this SDG are qualified as J/Estimated.**

10) Field duplicate samples were not collected with the samples under this chain of custody.

11) No anomalies were noted with respect to the metals reporting.

COMMENTS: Performance was acceptable, with the following exceptions and/or notes:

1) The soil samples for analysis of cyanide and hexavalent chromium were analyzed by July 1, 2024 within the required 14 day holding time (30 days for hex chromium).

2) No dilutions were required to quantitate results for the cyanide or hexavalent chromium analyses. Results from two aqueous field blanks were provided with no analytes detected.

3) Results from one set of solid matrix method blanks were provided in support of the cyanide and hexavalent chromium analyses, with no analytes detected.

4) Results from initial and continuing calibration analyses for cyanide were acceptable, with recoveries between 90 and 110 percent.

5-6) SGS provided results from project sample specific (GRID-26) matrix spike (MS) analyses in support of the cyanide and hexavalent chromium analyses. The MS recovery for soluble hexavalent chromium was low at 55.6 percent. **Due to the low MS recovery, all hexavalent chromium results are qualified as J/Estimated for detections and "UJ/Estimated and non-detect at the reporting limits stated" for non-detects.** The insoluble MS recovery for hexavalent chromium was in control at 93.8 percent, indicating a matrix impact when the soluble spike interacts with the soil sample. The cyanide MS recovery was acceptable at 101 percent.

7) SGS provided results from one set of solid matrix LCS analyses in support of the soil sample analyses for cyanide and hexavalent chromium. The LCS recoveries were acceptable, ranging from 91.5 to 98 percent.

8) SGS provided results from batch and sample specific laboratory duplicates. Precision between duplicate results was acceptable for cyanide and hexavalent chromium with a maximum RPD of 6.9 percent or results in agreement within a reporting limit increment.

9) No anomalies were noted with respect to the cyanide or hexavalent chromium reporting.

REDOX AND pH

Limited quality control was provided for the above listed analyses. Laboratory duplicate analyses were performed on a batch sample for cyanide with acceptable precision.

Sample GRID-26 was analyzed as a lab duplicate for analysis of pH, Redox potential, and cyanide with acceptable precision and a maximum RPD of 10.5 percent for cyanide.

RIDGEWOOD SOIL GRID SAMPLING

VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JD91204 DATED JULY 3, 2024

Matrix New World Engineering (Matrix) collected 17 soil samples and two aqueous field blanks on June 26, 2024. The sample results have been validated in accordance with the Project QAPP requirements, and professional judgment of the data reviewer.

The QC information evaluated has been described in the preceding pages. Based on this review, data provided for the soil samples collected are determined to be quantitative, with the exceptions noted in the following table.

Sample Identification(s) / Analyte(s)	Data Qualifier(s)	Reason(s) For Qualification
SVOCs All Samples / SVOC detections noted on pages 2, 3, and 4 of this validation report.	J/Estimated	These SVOCs were reported at concentrations between the method detection limit and the reporting limit. Accuracy in this portion of the calibration curve may be limited.
SVOCs All samples / Tentatively Identified Compounds (TICs)	J/Estimated	Numerous TICs were reported with each sample analyzed for SVOCs. Results for TICs are considered to be estimated in magnitude. In some cases, the identification of the TIC was verified against the library of SVOCs compounds associated with the method.
Pesticides All Samples / Pesticide detections noted on page 7 of this validation report.	J/Estimated	These pesticides were reported at concentrations between the method detection limit and the reporting limit. Accuracy in this portion of the calibration curve may be limited.
Pesticides All Samples / Pesticides as discussed on pages 8 and 9 of this report.	Potential bias. Detailed sample specific evaluation can be performed as requested.	DBCP Surrogate recoveries are high on one or more columns from one or more dilution runs for specific pesticide detection. Some TCMX recoveries are low. Matrix interferences are likely.
Pesticides All Samples / Pesticide detections noted on pages 9 and 10 of this validation report.	J/Estimated	Poor precision between pesticide detections on dual confirmation columns (signals 1 and 2), as footnoted by SGS. RPDs exceed 40 percent.

RIDGEWOOD SOIL GRID SAMPLING

VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JD91339 DATED JULY 9, 2024

INTRODUCTION

Matrix New World Engineering (Matrix) collected 11 soil samples, two field duplicate samples, and one aqueous field blank on June 27, 2024. Samples were relinquished to an SGS Laboratory courier, and then transported to SGS Laboratory, located in Dayton, New Jersey. Samples were received at SGS on June 28, 2024. Sample identifications and requested analyses are listed below.

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) The soil samples were extracted on July 2, 2024 within the required 14-day holding time. SVOC analyses were performed by July 3, 2024 within the 40 day holding time after extraction. Extraction and analysis holding times were met.

2) Sample GRID-20 was diluted by a factor ten times to quantify fluoranthene, phenanthrene, and pyrene. No other sample dilutions were required for analysis of SVOCs. Several SVOCs were detected in soil samples at concentrations between the method detection limit (MDL) and the reporting limit. **Due to limited accuracy in this portion of the calibration range these SVOCs results are qualified as J/Estimated, as noted in the following pages:**

3) SGS provided results from one full suite solid matrix method blank in support of the SVOC analyses. No SVOCs were detected in the method blank. Results from an aqueous method blank were also provided with no SVOCs detected

Results from one aqueous field blanks were provided. No SVOCs were detected in the field blanks.

4-5) SGS provided results from one full set of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the SVOC analyses. All LCS recoveries were within laboratory specified control limits, ranging from 35 to 89 percent. Accuracy, as demonstrated by these analyses is acceptable.

One set of aqueous LCS and LCS duplicate analyses were provided in support of the field blanks. Precision and accuracy, as demonstrated by these analyses is acceptable.

6-7) SGS provided results from one set of project specific (spike on sample GRID-3) matrix spike (MS) and MSD duplicate analyses in support of the SVOC analyses. MS and MSD recoveries ranged from 8 to 60 percent (various control limits). The maximum RPD between MS and MSD results was 42 percent. Precision and accuracy, as demonstrated by these analyses is acceptable, with the following exceptions where MS and MSD results were low (low recoveries shown in **bold**),

SVOC	Low MS / MSD % recoveries
3,3'-Dichlorobenzidine	**9** / 13
Hexachlorocyclopentadiene	13 / **8** (RPD high at 38%)

No action is taken based solely on the low MS and MSD recoveries in the project spikes unless additional quality control issues for these SVOCs are noted.

8) Six surrogates were spiked into each soil sample in support of the SVOC analyses. Surrogate recoveries were acceptable, ranging from 29 to 79 percent (various control limits with a low limits of 10-11 percent). Accuracy, as demonstrated by these analyses is acceptable.

9) Two sets of field duplicate samples were submitted in support of the SVOC analyses.

Sample DUP-1 was submitted as a blind field duplicate of primary sample GRID-3
Sample DUP-2 was submitted as a blind field duplicate of primary sample GRID-7.

Results of the field duplicate sampling for SVOCs that were detected in either of the primary or duplicate samples are presented below. Precision assessment is based on the RPD % between sample results. A 50 % RPD or less is used to define acceptable precision between the soil sample results. **Bold RPD values exceed this criterion. In such cases the primary and duplicate sample results are qualified as estimated.**

Field duplicate precision is determined to be acceptable, with RPDs less than 50 percent or with results in agreement within a reporting limit increment for all SVOC with the exception of total TIC, which are already estimated by definition.

* The initial sample weight extracted for sample DUP-2 was nearly twice that of sample GRID-7, resulting in a two-fold difference in reporting limits (DUP-2 having lower reporting limitis), though no dilution was performed

+/- RL = Results agree within a reporting limit increment and precision is determined to be acceptable.

10) No anomalies were noted with respect to results SVOC quantitation or reporting. SGS noted that CCV recoveries were high for some SVOCs that were not detected in the associated samples. No bias to the sample results is indicated by the high CCVs. SGS noted that CCV recoveries were low for some SVOCs that were not detected in the associated samples. These SVOCs included the following:

Hexachlorocyclopentadiene

SGS stated that a low level standard was analyzed to show that these SVOCs could be detected at reporting limits. Results for these standards were not provided.

SGS noted that CCV recoveries were high for some SVOCs that were detected in the associated samples. Many of these detections are already qualified due to results between the MDL and RL, are are not further qualified. Due to potential high bias, the following additional SVOCs results are qualified as J/Estimated. **Note that some of these detections exceed project SRS.**

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) The soil samples for analysis of pesticides were extracted on July 1, 2024 within the required 14-day holding time. Pesticide analyses were performed by July 3 2024 within the 40-day holding time after extraction.

2) Some samples were analyzed at dilutions to quantify specific pesticides as follows:

Sample ID	**Pesticide Dilutions**
GRID-5	5 times for 4,4-DDT
GRID-5	10 times for 4,4-DDE

No other samples were analyzed at dilutions to quantify pesticides. Several pesticides were detected in soil samples at concentrations between the method detection limit (MDL) and the reporting limit. **Due to limited accuracy in this portion of the calibration range these pesticide results are qualified as J/Estimated, as follows:**

Sample ID	Qualified Pesticides (ug/kg)

DUP-2	4,4'-DDE = 0.11 *J*

3) SGS provided results from two full suite solid matrix method blanks in support of the pesticide analyses. One aqueous method blank was also provided. No pesticides were detected in the method blanks:

One aqueous field blank was analyzed with the soil samples. No pesticides were detected in the field blanks.

4-5) SGS provided results from two full sets of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the pesticide analyses. All LCS recoveries were within laboratory specified control limits, ranging from 80 to 108 percent. Accuracy, as demonstrated by these analyses is acceptable. Some spike recoveries were reported from the 1st analytical signal, as precision for the secondary signal was poor.

LCS and LCS duplicate results were provided in support of the aqueous analyses (field blank) with acceptable accuracy. Precision between LCS and LCSD analyses in support of the field blank analyses was poor for Endosulfan-I with an RPD of 53 percent (upper control limit of 45 percent). This does not impact the soil sample results.

6-7) SGS provided results from one set of project specific matrix spike (MS) and MS duplicate analyses in support of the pesticide analyses (spike on project sample GRID-3). MS and MSD recoveries ranged from 71 to 137 percent. The maximum RPD between MS and MSD results was 29 percent for Beta-BHC. Precision and accuracy, as demonstrated by these analyses is acceptable, with the exception of a 1 percent high MSD recovery for Methoxychlor. No action is taken for the slight exceedance. Results from a batch MS/MSD were also provided with acceptable precision and accuracy.

8) Two surrogates (tetrachloro-m-xylene and decachlorobiphenyl) were spiked into each soil sample in support of the solid matrix pesticide analyses. Surrogates were reported from each of the two columns used in the analyses. Surrogate recoveries ranged from 18 to 767 percent and were out of control for several samples for one or both surrogates as listed below:

Sample ID	High DCBP % Rec
GRID-4	46 / **384** *(TCMX also low at 43 %)*
GRID-20	29 / **767** (TCMX also low at 18 %)
GRID-11	59 / **399** (TCMX also low at 37 %)
GRID-10A	44 / **171** (TCMX also low at 25 %)
GRID-21	44 / **283** (TCMX also low at 40 %)

Recoveries for the decachlorobiphenyl surrogate were high (upper control limit of 154 percent) from the second GC column (**bolded** results) in some samples. **In cases where the high surrogate was reported (see GC identification summaries in lab**

report), the results may be biased high, and the detected Pesticide results are qualified as J/Estimated

The evaluation of these surrogates is complex, as different pesticides may be quantified from the two columns (signals). In cases with high DCBP and low TCMX surrogates, the situation is more complex. The sample results must be reviewed in combination with the results footnotes and the "GC Identification Summaries" table provided in Section 10.7 of the SGS report to determine if each individual pesticide detection is associated with any bias.

There were no pesticide detections that exceeded project remediation standards, even though a high bias and possible matrix interference is indicated for many of the detections. The majority of detections are already qualified based on the reporting limit discussion in comment #2 of this validation, or due to poor dual column confirmation precision discussion below, in comment #11. Therefore, no further evaluation of the surrogates is provided here, unless a sample specific pesticide evaluation is requested.

9) Several sets of DDT/Endrin breakdown check standards were analyzed coinciding with each analytical batch. DDT and Endrin breakdown levels were all less than the QAPP specific level of 15 percent.

10) Two sets of field duplicate samples were submitted in support of the pesticide analyses.

Sample DUP-1 was submitted as a blind field duplicate of primary sample GRID-3
Sample DUP-2 was submitted as a blind field duplicate of primary sample GRID-7.

Results of the field duplicate sampling for SVOCs that were detected in either of the primary or duplicate samples are presented below. Precision assessment is based on the RPD % between sample results. A 50 % RPD or less is used to define acceptable precision between the soil sample results. Bold RPD values exceed this criterion. In such cases the primary and duplicate sample results are qualified as estimated.

Pesticides (mg/kg)	GRID-3		DUP 1		RPD		GRID-7		DUP 2		RPD
alpha-Chlordane	0.00024	J	0.00025	J	4		0.0004	U	0.000072	J	+/- RL
Chlordane (alpha and gamma)	0.0003	J	0.00025	J	18		0.0004	U	0.000072	J	+/- RL
Dieldrin	0.00017	J	0.00027	J	45		0.0004	U	0.00041	U	+/- RL
4,4'-DDD	0.00045	U	0.0004	U	+/- RL		0.00015	J	0.00041	U	+/- RL
4,4'-DDE	0.0011		0.00065		**51**		0.00018	J	0.00011	J	48
4,4'-DDT	0.0017		0.0018		6		0.00025	J	0.00042		+/- RL
Heptachlor epoxide	0.00013	J	0.00015	J	14		0.0004	U	0.00041	U	+/- RL

The value of the detection limit was used in the RPD calculation for samples when the primary or duplicate concentration was non-detect (U).

+/- RL = Results agree within a reporting limit increment and precision is determined to be acceptable, with the exception of the precision for 4,4-DDE and the GRID-3/DUP-1 pair. **Due to the poor precision the 4,4-DDE results or these two samples are qualified as J/Estimated.**

11) No anomalies were noted with respect to results pesticide quantitation or reporting, with the following exceptions. Numerous pesticides were flagged by SGS due to an RPD of more than 40% between the dual GC columns used for quantitation and confirmation. In many cases, the pesticides in question were already qualified as J/Estimated due to reporting limits and no further action is required. Many of these sample results would also be qualified in a detailed investigation of the surrogate recoveries. The following samples results were not previously qualified and are qualified due to poor precision between pesticide detections on the dual columns.

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) The soil samples for analysis of Aroclors were extracted on July 2, 2024 within the required 14-day holding time. Aroclor analyses were performed by July 2, 2024, within the 40 day holding time after extraction. Extraction and analysis holding times were met.

2) No soil samples were analyzed at dilutions to quantitate any Aroclors. Two Aroclor detections were reported at concentrations between the MDL and RL. **Due to limited accuracy in this portion of the calibration range these Aroclor results are qualified as J/Estimated, as follows:**

Sample ID	**Qualified Aroclors (ug/kg)**
GRID-10A	Aroclor 1262 = 5.3 *J*
GRID-5	Aroclor 1262 = 5.5 *J*

3) No other Aroclor were reported at concentration between the MDL and RL. Aroclor reporting limits are determined to be acceptable.

SGS provided results from two full suite solid matrix method blanks in support of the Aroclor analyses with no Aroclors detected. Results from one aqueous matrix field

blank and from one aqueous matrix method blank were provided with no PCBs detected.

4-5) SGS provided results from two sets of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the Aroclor analyses. Aroclors 1016 and 1260 were spiked with acceptable recoveries of 83 and 94 percent. Accuracy, as demonstrated by these analyses is acceptable.

Results from one set of aqueous matrix set of LCS and LCSD spikes were provided in support of the field blanks, with LCS recoveries ranging from 85 to 105 percent. Precision and accuracy, as demonstrated by these analyses is acceptable.

6-7) SGS provided results from two sets of project specific matrix spike (MS) and MSD duplicate analyses in support of the Aroclor analyses (spikes on project samples GRID-4 and DUP-1). MS spikes were performed on Aroclors 1016 and 1260. MS and MSD recoveries ranged from 82 to 102 percent and were within prescribed control limits. Precision between MS and MSD results was acceptable, with a maximum RPD of 5 percent.

8) Two surrogates (tetrachloro-m-xylene and decachlorobiphenyl) were spiked into each soil sample in support of the solid matrix Aroclor analyses. Surrogate recoveries were reported from both analytical columns and ranged from 74 to 123 percent. Accuracy, as demonstrated by these analyses is acceptable.

9) Two sets of field duplicate samples were submitted in support of the SVOC analyses.

Sample DUP-1 was submitted as a blind field duplicate of primary sample GRID-3
Sample DUP-2 was submitted as a blind field duplicate of primary sample GRID-7.

No Aroclors were detected in either sample of the primary or duplicate pair. Field duplicate precision is determined to be acceptable.

10) No anomalies were noted with respect to Aroclor quantitation or reporting for the oil samples.

COMMENTS: Performance was acceptable, with the following exceptions and/or notes:

1) The soil samples for analysis of TAL metals were prepared by July 1, 2024 and were analyzed within the 6 month holding times by July 2, 2024 (within 28 days for mercury). Extraction and analysis holding times were met.

2) Sample Grid-10A was diluted by a factor of two times to quantitate mercury. No other metal analyses were performed at dilutions. All metals results were reported to the RL. No metals detections were reported at concentrations between the MDL and RL. Reporting limits are determined to be acceptable.

3) Results from numerous sets of initial and continuing calibration blanks were provided in support of the TAL metals analyses. Results for these blanks were presented in aqueous units. No TAL metals were detected at concentrations exceeding the RL. Results from one set of solid matrix method blanks were also provided, with no metals detected at concentrations exceeding the RL.

   Results from one aqueous field blank were provided with no metals detected.

4) Results from several sets of initial and continuing calibration analyses were provided for the TAL metals. All ICV and CCV standard recoveries were within control limits of 90-110 percent. Results from high end (typically 8,000 ug/L) calibration standards

were provided with acceptable recoveries between 90 and 110 percent for selected metals. Results from low end calibration standards (CRI) were also reported. CRI control limits are 80-120 percent (70-130 for mercury).

5) Results from several sets of ICP interference check samples were provided in support of the TAL metals. ICP interference check sample recoveries were acceptable, within control limits of 80-20 percent).

6-7) SGS provided results from one set of solid matrix project specific (spike on soil sample GRID-3) matrix spike (MS) and MSD duplicate analyses in support of the TAL metals analyses. MS and MSD recoveries are evaluated herein when the sample concentration in the native sample does not exceed the spike concentration by more than 4 times. MS and MSD control limits were 75 – 125 percent.

MS/MSD recoveries were out of control limits in the project spike as follows:

Metal spiked	MS / MSD Recovery %	Validation Action
Aluminum	**161.1 / 232.3**	High bias – J/Estimated
Antimony	**45.1 / 42.1**	Low bias – UJ/Estimated at RL

8) SGS provided results from one set of solid matrix LCS analyses in support of the TAL metals is soil samples. The LCS recoveries were acceptable ranging from 88.5 to 100.8 percent (control limits of 80-120 percent).

9) SGS provide results from one set of serial dilution analyses performed on project sample GRID-3. Percent differences between the initial result and the 5 times serial dilution result were less the control limit of 10 percent for all metals results where the initial result was greater than 50 times the instrument detection limit.

10) Two sets of field duplicate samples were submitted in support of the SVOC analyses.

DUP-1 was submitted as a blind field duplicate of primary sample GRID-3
Sample DUP-2 was submitted as a blind field duplicate of primary sample GRID-7.

Results of the field duplicate sampling for TAL metals that were detected in either of the primary or duplicate samples are presented below. Precision assessment is based on the RPD % between sample results. A 50 % RPD or less is used to define acceptable precision between the soil sample results. **Bold RPD values exceed this criterion. In such cases the primary and duplicate sample results are qualified as estimated.**

Field duplicate precision is determined to be acceptable,, with the exaction of that for barium in the DUP-1/GRID-3 pair. **Due to the poor precision, the barium results for these samples are qualified as J/Estimated.**

11) No anomalies were noted with respect to the metals reporting.

COMMENTS: Performance was acceptable, with the following exceptions and/or notes:

1) The soil samples for analysis of cyanide and hexavalent chromium were analyzed by July 5, 2024 within the required 14 day holding time (30 days for hex chromium).

2) No dilutions were required to quantitate results for the cyanide, sulfide, or hexavalent chromium analyses.

3) Results from one set of solid matrix method blanks were provided in support of the cyanide and hexavalent chromium analyses, with no analytes detected. Results from one aqueous field blank were provided with no analytes detected.

4) Results from initial and continuing calibration analyses for cyanide were acceptable, with recoveries between 90 and 110 percent.

5-6) SGS provided results from project sample specific (GRID-13 and GRID-9) matrix spike (MS) analyses in support of the cyanide and/or hexavalent chromium analyses. The MS recovery for soluble hexavalent chromium was low at 55.8 percent. **Due to the low MS recovery, all hexavalent chromium results are qualified as J/Estimated for detections and "UJ/Estimated and non-detect at the reporting limits stated" for non-detects.** The insoluble MS recovery for hexavalent chromium was in control at 91.3 percent, indicating a matrix impact

when the soluble spike interacts with the soil sample. The cyanide solid matrix MS recovery on sample DUP-1 was acceptable at 104.2 percent.

7) SGS provided results from one set of solid matrix LCS analyses in support of the soil sample analyses for cyanide and hexavalent chromium. The LCS recoveries were acceptable, ranging from 91.2 to 109 percent.

8) SGS provided results from batch and sample specific (samples DUP-1 and GRID-9) laboratory duplicates. Precision between duplicate results was acceptable for cyanide and hexavalent chromium with a maximum RPD of 23.5 percent or results in agreement within a reporting limit increment.

Two sets of field duplicate samples were submitted in support of the hexavalent chromium and cyanide analyses.

DUP-1 was submitted as a blind field duplicate of primary sample GRID-3
Sample DUP-2 was submitted as a blind field duplicate of primary sample GRID-7.

Results (mg/kg)	DUP- 1	GRID-3	RPD		DUP-2	GRID-7	RPD
Hexavalent chromium	<0.43	<0.43	+/- RL		<0.43	0.49	+/- RL
Cyanide	<0.26	0.68	**>89**		<0.24	<0.21	+/- RL

Field duplicate precision is poor or cyanide in the DUP-1 and GRID-3 pair. **Due to the poor field duplicate precision the cyanide results for these samples are qualified as J/Estimated for the detection and UJ/Estimated and non-detect at the reporting limits stated" for the non-detect.**

9) No anomalies were noted with respect to the cyanide or hexavalent chromium reporting.

RIDGEWOOD SOIL GRID SAMPLING

VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JD91339 DATED JULY 9, 2024

Matrix New World Engineering (Matrix) collected 11 soil samples, two field duplicate samples, and one aqueous field blank on June 27, 2024. The sample results have been validated in accordance with the Project QAPP requirements, and professional judgment of the data reviewer.

The QC information evaluated has been described in the preceding pages. Based on this review, data provided for the soil samples collected are determined to be quantitative, with the exceptions noted in the following table.

Sample Identification(s) / Analyte(s)	Data Qualifier(s)	Reason(s) For Qualification
SVOCs All Samples / SVOC detections noted pages 2, 3, and 4 of this validation report.	J/Estimated	These SVOCs were reported at concentrations between the method detection limit and the reporting limit. Accuracy in this portion of the calibration curve may be limited.
SVOCs All Samples / SVOC detections noted page 7 of this validation report.	J/Estimated for detected SVOC not listed in the MDL/RL discussion above.	Continuing calibration recovery was high and the SVOCs were detected in the samples. Sample results may be biased high. **Note, some of these qualified detections exceeded SRS criteria.**
SVOCs All samples / Tentatively Identified Compounds (TICs)	J/Estimated	Numerous TICs were reported with each sample analyzed for SVOCs. Results for TICs are considered to be estimated in magnitude. In some cases, the identification of the TIC was verified against the library of SVOCs compounds associated with the method.
Pesticides All Samples / Pesticide detections noted on page 9 of this validation report.	J/Estimated	These pesticides were reported at concentrations between the method detection limit and the reporting limit. Accuracy in this portion of the calibration curve may be limited.
Pesticides GRID-3 and DUP- 1 / **4,4-DDE**	J/Estimated	Poor precision between results of primary and duplicate samples. RPD exceed 50 percent.
Pesticides All Samples / Pesticide detections noted on page 12 of this validation report.	J/Estimated	Poor precision between results of dual column confirmation. RPDs exceed 40 percent.

Sample Identification(s) / Analyte(s)	Data Qualifier(s)	Reason(s) For Qualification
Aroclors GRID-10A / Aroclor 1262 GRID-5 / Aroclor 1262	J/Estimated	These Aroclors were reported at concentrations between the method detection limit and the reporting limit. Accuracy in this portion of the calibration curve may be limited.
TAL Metals All soil samples based on project specific matrix spike recoveries **Aluminum / High bias** **Antimony / Low bias**	J/Estimated for aluminumdetections "UJ/Estimated and non-detect at the reporting limits stated" for antimony NDs	MS and MSD recoveries for these metals are out of control limits. Sample results for the metals listed may be biased high (aluminum) or low (antimony) as noted.
TAL Metals GRID 3 and DUP 1 / **Barium**	J/Estimated for detections.	Poor precision between results of primary and duplicate samples. RPDs exceed 50 percent.
Hexavalent Chromium All Samples	J/Estimated for detections UJ/Estimated and non-detect at the reporting limits stated"	Low project specific matrix spike recoveries on the soluble spike. Matrix interference is indicated. Samples results may be biased low.
Gen chemistry GRID-3 and DUP-1 / **Cyanide**	J/Estimated (GRID-3) UJ/Estimated and non-detect at the reporting limits stated (DUP-1)	Poor precision between results of primary and duplicate samples. RPDs exceed 50 percent.
