Re: IMPORTED BERM MATERIAL EVALUATION – GRID SOIL REMEDIAL INVESTIGATION
VILLAGE OF RIDGEWOOD HISTORIC SITE – SCHEDLER PROPERTY
460 WEST SADDLE RIVER ROAD
VILLAGE OF RIDGEWOOD, BERGEN COUNTY, NEW JERSEY 07450
NJDEP CASE NO. 24-05-28-1117-27
PI No. 1062723
MATRIX NO. 23-1429

Dear Mr. Rutishauser:

Matrix New World Engineering, Land Surveying, and Landscape Architecture, PC (Matrix) has prepared this letter report detailing the recent soil sampling activities at the above referenced site located at 460 West Saddle River Road, Village of Ridgewood (Ridgewood), New Jersey (Site). The summarized work below was conducted as part of a remedial investigation (RI) focusing on the impacted soil samples identified during the June 2024 soil sampling event. This sampling was associated with the grid samples collected from the areas of the property outside of the constructed soil berm. The RI was conducted in general accordance with NJDEP's *Technical Requirements for Site Remediation (TRSR)* N.J.A.C. 7:26E, NJDEP's *Field Sampling Procedures Manual (FSPM)*, and any other applicable NJDEP Guidance Documents.

BACKGROUND

Ridgewood received correspondence from the NJDEP Bureau of Solid Waste Compliance & Enforcement (BSWCE) on December 11, 2023, questioning the sources and quality of the fill material that were imported to the Site to create the berm (**Appendix A**). Based on this correspondence from the NJDEP, it appears that approximately 10,000 cubic yards of fill material were imported to the Site to create the soil berm, as well as possibly filling other low areas of the Site. Subsequently, Ridgewood retained Matrix to complete a review of the data associated with the fill material and respond to the NJDEP BSWCE with a Sampling and Analysis Plan (SAP). On April 2, 2024 Matrix submitted a SAP to the NJDEP BSWCE detailing the scope of work for the sampling of the berm and filled in areas, which

was conditionally approved by NJDEP BSWCE on April 3, 2024. The conditional approval was based on the BSWCE's request for additional sampling among the balance of the Site, outside of the constructed soil berm.

On May 3, 2024 Matrix performed a soil investigation on the Berm portion of the Site (AOC-1). A total of 14 soil samples (SB-1 through SB-14) were collected throughout the berm for laboratory analysis and were analyzed for Target Compound List (TCL) Semi-volatile Organic Compounds (SVOCs) and Target Analyte List (TAL) Metals. Soil samples SB-1, SB-3 through SB-5, SB-7, SB-8, SB-10 through SB-12, and SB-14 were additionally analyzed for TCL Pesticides and polychlorinated biphenyls (PCBs). Several sample locations were identified with concentrations of benzo(a)anthracene, lead, and mercury exceeding the NJDEP's Migration to Groundwater Soil Remediation Standard (MGWSRS). Additionally, concentrations of benzo(a)pyrene were detected exceeding the NJDEP's Residential Ingestion-Dermal Soil Remediation Standard (RIDSRS) in several samples. Due to the RIDSRS exceedance of benzo(a)pyrene, as well as the MGWSRS exceedances of benzo(a)anthracene, lead, and mercury, identified in the soils associated with the imported material, Matrix notified the NJDEP via the NJDEP's Spill Hotline on May 28, 2024. NJDEP Contaminated Site Remediation and Redevelopment (CSRR) program assigned Case No. 24-05-28-1117-27 and Program Interest No. 1062723 to the Site. Subsequently, Matrix submitted a Confirmed Discharge Notification (CDN) form on June 10, 2024 and on July 12, 2024 Chris Pittarese of Matrix was retained as the Licensed Site Remediation Professional (LSRP) for the Site. In accordance with the NJDEP's *Alternative Remediation Standards Technical Guidance for Soil and Soil Leachate for the Migration to Groundwater Exposure Pathway* (May 2021) guidance document, a Synthetic Participation Leaching Procedure (SPLP) was performed for benzo(a)anthracene, lead, and mercury and a Site-Specific Alternative Remediation Standards (ARS) for each were calculated utilizing the SPLP results. Concentrations of benzo(a)anthracene, lead, and mercury detected in the fill material were below their respective Site-Specific ARS.

On June 18, 2024 Matrix submitted correspondence to the NJDEP BSWCE detailing the scope of work for the grid sampling of the filled in areas among the balance of the site, which was conditionally approved by NJDEP BSWCE on June 20, 2024. The conditional approval letter is included in **Appendix B.** The conditional approval was based on BSWCE's request for additional sampling among the balance of the Site, within established grid patterns in areas of suspected contamination based on field and aerial observations.

On June 26 and June 27, 2024 Matrix performed a soil investigation on the balance of the Site (AOC-2). A total of 28 grid soil samples (GRID-1 through GRID-28) were collected and submitted for laboratory

analysis. All grid soil borings were advanced within the limits of the pre-determined sampling grid at locations requested by the NJDEP's representative where imported fill was observed to be present. Soil Samples GRID-1 through GRID-28 were analyzed for TCL SVOCs, TCL Pesticides, PCBs, TAL Metals, and Hexavalent Chromium. Soil samples with photoionization detector (PID) (MiniRae parts per million [ppm] meter) readings greater than or equal to 10 parts per million (ppm) above ambient background (GRID-11 and GRID-21) were additionally analyzed for TCL volatile organic compounds (VOCs). An additional soil sample (SB-12R) was collected at 3.0-3.5 feet bgs in the former location of SB-12 within the berm and analyzed for VOCs. The soil boring investigation identified the SVOC compound benzo(a)pyrene in six soil samples (GRID-4, GRID-11, GRID-16, GRID-21, GRID-26, GRID-28) at concentrations exceeding the NJDEP's RIDSRS and in two soil samples (GRID-18 and GRID-20) at concentrations exceeding both the NJDEP's RIDSRS and NRIDSRS. The soil investigation identified the SVOC compound benzo(a)anthracene in two soil samples (GRID-18 and GRID-20) at concentrations exceeding the NJDEP's MGWSRS and Site-Specific ARS. The soil investigation identified the metal compound mercury in one soil sample (GRID-10A) at a concentration exceeding the NJDEP's MGWSRS and Site-Specific ARS.

On November 7, 2024 Matrix submitted a Sampling Workplan to the NJDEP BSWCE detailing the scope of work for the grid delineation sampling of the previously collected grid samples, which was conditionally approved by NJDEP on November 8, 2024. The conditional approval was based on NJDEP BSWCE's request for additional sampling among the balance of the Site to delineate the identified compounds exceeding the SRS, the characterization of eight additional samples where fill material was observed, and the resampling of pesticides from the nine locations. The Sampling Workplan and Signed Conditional Approval are included as **Appendix C and D**.

GRID DELINEATION SAMPLING

The following section presents a technical overview of remedial investigation activities performed by Matrix at the Site on November 21, 22 and 26, 2024. Soil samples were collected in general accordance with NJDEP's Technical Requirements for Site Remediation (TRSR) N.J.A.C. 7:26E, NJDEP's Field Sampling Procedures Manual (FSPM), Soil Site Investigation/Remedial Investigation/Remedial Action Technical Guidance Document (March 2015), and any other applicable NJDEP Guidance Documents. The objective of this investigation was to perform delineation sampling of the exceedances identified from the site investigation grid sampling on the balance of the Site, outside of the constructed soil berm.

All soil samples were submitted to an NJDEP certified laboratory, SGS Laboratories of Dayton, New Jersey (#12129) within the prescribed field holding times and were received intact, and properly

preserved, with the exception of five soil samples from the GRID-20 delineation area. Matrix submitted all laboratory data to a third-party independent data validator, Nankoweep Environmental Consulting (Nankoweep) to review holding times, confirm that each analysis method met quality control requirements, and method blanks met method specific requirements.

The applicable remediation standards for soil at this Site are the NJDEP's May 2021 Migration to Groundwater Exposure Pathway Soil Remediation Standards (MGWSRS), Non-Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards (NRIDSRS), Non-Residential Inhalation Exposure Pathway Soil Remediation Standards (NRISRS), Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards (RIDSRS), and the Residential Inhalation Exposure Pathway Soil Remediation Standards (RISRS). As mentioned above, a Site-Specific ARS for the MGWSRS was calculated for benzo(a)anthracene, lead, and mercury.

Matrix retained Environmental Probing, Inc. (EPI) from Cream Ridge, New Jersey, to conduct 77 soil borings around the nine locations identified with exceedances in June 2024. This work was carried out using Geoprobe® direct push technology on November 21, 22, and 26, 2024 and in compliance with N.J.A.C. 7:26E(4.2). A Matrix representative provided full-time oversight of drilling activities. In addition, a representative from the NJDEP BSWCE, Tom Farrell, was present during the soil sampling. Each of the nine original grid sample locations identified with exceedances were further investigated with two rings of horizontal delineation borings equally spaced to approximately 7.5 feet in the north, south, east, and west directions; therefore, creating the first ring with a 7.5 foot radius and the second ring with a 15 foot radius from the original sampling location. In instances that fill material with visually observed solid waste was encountered after measuring 7.5 feet, the boring locations were extended outwards until solid waste was not observed. Samples were not collected within fill material from the first ring where solid waste was visually observed, as BSWCE will require excavation of that material regardless of any analytical data. The objective of moving the first ring beyond 7.5 feet was to ensure the first ring did not encompass solid waste and samples were collected from non-solid waste material, thus properly delineating the extent of solid waste material. The step outs were completed in the cardinal directions (north, south, east, and west) identified as N, S, E, and W in the sample nomenclature. Horizontal delineation samples were collected from the original sample interval of 1 to 1.5 feet below ground surface (bgs). Additionally, the original grid samples (collected from 1 to 1.5 bgs) were vertically delineated with two sampling intervals: the first sample collected one foot deeper (2 to 2.5 feet bgs) than the original sample interval and a second sample collected 1.5 feet (2.5 to 3 feet bgs) deeper than the original sample interval. All soil borings were advanced to a depth of 4 feet below ground surface (BGS) with five-foot sampling cores using dedicated acetate sleeves with a Geoprobe. The soil was visually inspected for any

potential visual or olfactory impacts, screened with a PID for organic vapors and logged for material content and lithology.

Based on the approved NJDEP BSWCE SAP, a total of 86 delineation soil samples, surrounding the June 2024 grid sample locations identified with exceedances (GRID-4, GRID-10A, GRID-11, GRID-16, GRID-18, GRID-20, GRID-21, GRID-26, and GRID-28), were collected and submitted for laboratory analysis or extracted and held as a contingency sample. Each delineation sample was analyzed for the compound of concern that was detected exceeding the NJDEP's SRS. Delineation soil samples surrounding GRID-4, GRID-11, GRID-16, GRID-21, GRID-26, and GRID-28 were analyzed for benzo(a)pyrene. Delineation soil samples surrounding GRID-18 and GRID-20 were analyzed for benzo(a)pyrene and benzo(a)anthracene. Delineation soil samples surrounding GRID-10A were analyzed for mercury and benzo(a)pyrene. Per the NJDEP's request, for any delineation sample that displayed a visually inconsistent appearance to the fill material that has already been characterized (i.e., a different kind of fill material is identified), the analysis of that sample location was to be expanded to analyze the Target Compound List/Target Analyte List (TCL/TAL) plus a forward library search (+30) suite. All delineation samples were collected within native soils and did not indicate a visually inconsistent appearance to the fill material that had already been characterized, so no sample locations were expanded to analyze TCL/TAL+30. Quality Assurance/Quality Control (QA/QC) samples included three field blanks and five duplicate samples. The field blank samples FB-1, FB-2, and FB-3 were analyzed for TCL/TAL+30. Duplicate samples, DUP-1, DUP-2, and DUP-3, were analyzed for benzo(a)pyrene, DUP-4 was analyzed for benzo(a)pyrene and benzo(a)anthracene, and DUP-5 was analyzed for mercury and benzo(a)pyrene.

There were no observations of elevated PID readings, odor, staining, or sheen throughout the soil column in any of the delineation sample locations. The native soil encountered throughout the Site predominantly consisted of a brown sandy silt. A sample summary table is included as **Table 1**. The soil sample analytical results are summarized below and are included on **Table 2.** The soil boring delineation sample locations are shown on **Figure 2** with analytical results displayed on **Figure 2A through 2I.** Soil boring logs are provided in **Appendix E**.

The Nankoweep data validation report is included as **Appendix F**. Additional information regarding the reliability of the laboratory analytical data can be found in the Case Narrative/Conformance Summary section of the laboratory analytical reports for soil included in **Appendix G**.

<u>GRID-4</u>

The contaminant of concern (COC) at this grid location was benzo(a)pyrene. Based on analytical results for the GRID-4 delineation area, vertical delineation sample GRID-4(2.0-2.5) exhibited concentrations of benzo(a)pyrene below all applicable NJDEP SRS. The horizontal delineation step outs were collected approximately 7.5 feet from the original GRID-4 location within the first ring and ranged from 15 to 20 feet from GRID-4 within the second ring. The corresponding delineation samples (GRID-4-N1, GRID-4-S1, GRID-4-E1, GRID-4-W1) were collected and analyzed for benzo(a)pyrene. All four horizontal delineation samples did not exhibit concentrations for benzo(a)pyrene above applicable NJDEP SRS within the first delineation ring; therefore, the second group of step out samples were not activated. Based on the analytical results, the vertical and horizontal delineation of GRID-4 is complete.

GRID-10A

The COC at this grid location was mercury. Given the presence of benzo(a)pyrene at other grid locations, the NJDEP BSWEC requested that delineation samples from GRID-10A also be analyzed for benzo(a)pyrene. Based on analytical results for the GRID-10A delineation area, vertical delineation sample GRID-10A(2.0-2.5) exhibited concentrations of mercury and benzo(a)pyrene below their applicable NJDEP SRS. The horizontal delineation step outs were collected approximately 7.5 to 10.5 feet from the original GRID-10A location within the first ring and ranged from 15 to 18 feet from GRID-10A within the second ring. Both northern delineation samples, GRID-10A-N1 and GRID-10A-N2, exhibited concentrations (0.939 mg/kg and 0.822 mg/kg, respectively) of benzo(a)pyrene exceeding the NJDEP RIDSRS. Both southern delineation samples, GRID-10A-S1 and GRIS-10A-S2, exhibited concentrations (0.31 mg/kg and 0.98 mg/kg, respectively) of mercury exceeding the ARS-MGWSRS. Both GRID-10A-E1 and GRID-10A-W1 exhibited concentrations of benzo(a)pyrene and mercury below the applicable NJDEP SRS. Further investigation is recommended in the northern direction at GRID-10A to identify the extent of the benzo(a)pyrene exceedances and in the southern direction to identify the extent of mercury exceedances.

GRID-11

The COC at this grid location was benzo(a)pyrene. Based on analytical results for the GRID-11 delineation area, vertical delineation sample GRID-11(2.0-2.5) exhibited a concentration of benzo(a)pyrene (0.804 mg/kg) exceeding the NJDEP RIDSRS; its corresponding deeper delineation sample GRID-11(2.5-3.0) results did not exceed its applicable NJDEP SRS. The horizontal delineation step outs were collected approximately 7.5 feet from the original GRID-11 location within the first ring and ranged from 15 to 25 feet from GRID-11 within the second ring. The horizontal delineation sample GRID-11-N1 exhibited a concentration (0.89 mg.kg) exceeding the NJDEP RIDSRS; the second step out sample, GRID-11-N2, exhibited a concentration of benzo(a)pyrene below its applicable NJDEP SRS.

Both southern delineation samples GRID-11-S1 and GRID-11-S2 exhibited concentrations (0.561 mg/kg and 1.03 mg/kg, respectively) exceeding the NJDEP RIDSRS. Both delineation samples GRID-11-E1 and GRID-11-W1 exhibited concentrations of benzo(a)pyrene below its applicable NJDEP SRS. Further investigation is recommended in the southern direction at GRID-11 to identify the extent of the benzo(a)pyrene exceedances.

GRID-16

The COC at this grid location was benzo(a)pyrene. Based on analytical results for the GRID-16 delineation area, vertical delineation sample GRID-16(2.0-2.5) did not exhibit concentrations for benzo(a)pyrene above applicable NJDEP SRS. The horizontal delineation step outs were collected approximately 7.5 feet from the original GRID-16 location within the first ring and approximately 15 feet from GRID-16 within the second ring. The four horizontal delineation samples within the first delineation ring (GRID-16-N1, GRID-16-S1, GRID-16-E1, GRID-16-W1) did not detect benzo(a)pyrene; therefore, the second group of step out samples were not activated. Based on the analytical results, the vertical and horizontal delineation of GRID-16 is complete.

GRID-18

The COCs at this grid location were benzo(a)pyrene and benzo(a)anthracene. Based on analytical results for the GRID-18 delineation area, vertical delineation sample GRID-18(2.0-2.5) did not exhibit concentrations for benzo(a)pyrene or benzo(a)anthracene above applicable NJDEP SRS. The horizontal delineation step outs were collected approximately 7.5 feet from the original GRID-18 location within the first ring and approximately 15 to 36 feet from GRID-18 within the second ring. The four horizontal delineation samples within the first delineation ring (GRID-18-N1, GRID-18-S1, GRID-18-E1, GRID-18-W1) did not exhibit concentrations of benzo(a)pyrene or benzo(a)anthracene above applicable NJDEP SRS; therefore, the second group of step out samples were not activated. Based on the analytical results, the vertical and horizontal delineation of GRID-18 is complete.

GRID-20

The COCs at this grid location were benzo(a)pyrene and benzo(a)anthracene. Based on analytical results for the GRID-20 delineation area, vertical delineation sample GRID-20(2.0-2.5) exhibited a concentration (2.82 mg/kg) of benzo(a)pyrene exceeding the NJDEP NRIDSRS and a concentration (2.52 mg/kg) of benzo(a)anthracene exceeding the NJDEP ARS-MGWSRS; its corresponding deeper delineation sample GRID-20(2.5-3.0) identified a concentration (2.63 mg/kg) exceeding the NJDEP NRIDSRS for benzo(a)pyrene. The sample collected from 2.5 to 3.0 feet bgs was not released for the contingent benzo(a)anthracene analysis. The horizontal delineation step outs were collected approximately 7.5 to

10.5 feet from the original GRID-20 location within the first ring and ranged from 15 to 18 feet from GRID-20 within the second ring.

All delineation samples within the first step out ring, GRID-20-N1, GRID-20-S1, GRID-20-E1, and GRID-20-W1, exhibited concentrations (9.26 mg/kg, 6.22 mg/kg, 2.5 mg/kg, and 7.52 mg/kg, respectively) of benzo(a)pyrene exceeding both the NJDEP RIDSRS and the NRIDSRS. The corresponding further step out delineation samples GRID-20-N2, GRID-20-S2, GRID-20E2, and GRID-20-W2 exhibited concentrations (1.52 mg/kg, 0.868 mg/kg, 1.73 mg/kg, and 0.817 mg/kg, respectively) of benzo(a)pyrene exceeding the NJDEP RIDSRS. Samples GRID-20-N1, GRID-20-S1, and GRID-20-W1 exhibited concentrations (7.65 mg/kg, 5.44 mg/kg, and 6.74 mg/kg, respectively) of benzo(a)anthracene exceeding the NJDEP RIDSRS and sample GRID-20-E1 exhibited a concentration (2.35 mg/kg) of benzo(a)anthracene exceeding the ARS-MGWSRS. The corresponding second ring step out delineation samples GRID-20-N2, GRID-20-S2, and GRID-20-W2 exhibited concentrations of benzo(a)anthracene below all applicable NJDEP SRS. Sample GRID-20-E2 was not released for the contingent benzo(a)anthracene analysis.

Due to a discrepancy at the laboratory regarding the method hold times for the second vertical delineation sample and the second ring of step-out samples, these samples were analyzed outside of the required hold times and will not be used to determine clean boundaries of contamination in GRID-20. Based on the exceedances of benzo(a)pyrene identified both vertically and in all cardinal directions, this grid is expected to be delineated using clean samples from adjacent grid locations. Further investigation is recommended to identify the vertical extent of benzo(a)pyrene and benzo(a)anthracene exceedances.

GRID-21

The COC at this grid location was benzo(a)pyrene. Based on analytical results for the GRID-21 delineation area, vertical delineation sample GRID-21(2.0-2.5) exhibited concentrations of benzo(a)pyrene below all applicable NJDEP SRS. The horizontal delineation step outs to the north and east were collected approximately 7.5 to 17 feet from the original GRID-21 location within the first ring and ranged from 15 to 45 feet from GRID-21 within the second ring. During the collection of the delineation samples, it was determined that the proposed delineation sample locations (GRID-21-S1, GRID-21-S2, GRID-21-W1, and GRID-21-W2) were located within fill material which extended into the soil berm. As a result, samples were not collected at these locations. Given the planned remediation of the soil berm, which includes excavation and off-site disposal, the southern and western boundaries of GRID-21 are expected to be excavated along with the soil berm. Both northern delineation samples GRID-21-N1 and GRID-21-N2 exhibited concentrations (0.586 mg/kg and 1.06 mg/kg, respectively) of

benzo(a)pyrene exceeding the NJDEP RIDSRS. GRID-21-E1 exhibited a concentration of benzo(a)pyrene below its applicable NJDEP SRS. Further investigation is recommended in the northern direction at GRID-21 to identify the extent of the benzo(a)pyrene exceedances.

GRID-26

The COC at this grid location is benzo(a)pyrene. Based on analytical results for the GRID-26 delineation area, vertical delineation sample GRID-26(2.0-2.5) did not exhibit concentrations for benzo(a)pyrene above applicable NJDEP SRS. The horizontal delineation step outs were collected approximately 7.5 feet from the original GRID-26 location within the first ring and approximately 15 feet from GRID-26 within the second ring. The four horizontal delineation samples (GRID-26-N1, GRID-26-S1, GRID-26-E1, GRID-26-W1) from the first ring did not detect concentrations of benzo(a)pyrene; therefore, the second group of step out samples were not activated. Based on the analytical results, the vertical and horizontal delineation of GRID-26 is complete.

GRID-28

The COC at this grid location is benzo(a)pyrene. Based on analytical results for the GRID-28 delineation area, vertical delineation sample GRID-28(2.0-2.5) exhibited a concentration (0.772 mg/kg) of benzo(a)pyrene exceeding the NJDEP RIDSRS; its corresponding deeper delineation sample GRID-28(2.5-3.0) also exhibited a concentration (1.36 mg/kg) of benzo(a)pyrene exceeding the NJDEP RIDSRS. The horizontal delineation step outs were collected approximately 7.5 to 60 feet from the original GRID-28 location within the first ring and ranged from 15 to 72 feet from GRID-28 within the second ring. During the collection of the delineation samples, it was determined that horizontal delineation sample locations GRID-28-S1, GRID-28-S2, GRID-28-W1, and GRID-28-W2 were located within fill material which extended into the soil berm and were not analyzed. Given the planned remediation of the soil berm, which includes excavation and off-site disposal, the southern and western boundaries of GRID-28 are expected to be excavated along with the soil berm. Delineation samples, GRID-28-N1 and GRID-28-E1 did not detect concentrations of benzo(a)pyrene. Further investigation is recommended at GRID-28 to identify the vertical extent of the benzo(a)pyrene exceedances.

PESTICIDE QUALITY ASSURANCE/QUALITY CONTROL (QA/QC) SAMPLING

Samples collected as part of the June 2024 grid site investigation indicated a laboratory QA/QC discrepancy involving the Matrix Spike analysis on six pesticide compounds. Based on the NJDEPs BSWCE's November 2024 conditional approval, resampling for pesticides from the nine locations included in the RI delineation (GRID-4, GRID-10A, GRID-11, GRID-16, GRID-18, GRID-20, GRID-21, GRID-26, and GRID-28) was requested as a QA/QC check. A total of nine soil samples, GRID-4R, GRID-

10R, GRID-11R, GRID-16R, GRID-18R, GRID-20R, GRID-21R, GRID-26R, and GRID-28R, were collected and analyzed TCL Pesticides with Matrix Spike. All pesticide samples were collected at the same depths as the June 2024 samples, approximately 1.0 to 1.5 feet bgs. Laboratory analytical results indicated that one pesticide analyte, heptachlor epoxide, was identified in sample GRID-4R at a concentration (0.0799 mg/kg) exceeding the NJDEP's RIDSRS of 0.076 mg/kg. The presence of this pesticide may be linked to the maintained lawn of the residential structure on-site, as GRID-4R is located adjacent to it. The corresponding deeper sample collected from GRID 4 collected at 2.0 to 2.5 feet bgs was run for pesticides. Based on the analytical results, heptachlor epoxide was not detected exceeding any of the NJDEP SRS. The remaining samples collected to further assess pesticides (GRID-10R, GRID-11R, GRID-16R, GRID-18R, GRID-20R, GRID-21R, GRID-26R, GRID-28R) results did not exhibit concentrations of pesticides above applicable NJDEP SRS. The third-party data validation results for the pesticide samples showed that the matrix spike analyses were out of range, making it difficult to determine a clear direction or level of bias. Further investigation is necessary at GRID-4R to identify the horizontal extent of the heptachlor epoxide exceedance. The samples are included on the summary table, **Table 1**. The soil sample analytical results are summarized below and are illustrated on **Table 3**. Soil sample locations and analytical results are shown on **Figure 3** and **Table 3.** The soil boring logs are provided in **Appendix E**.

ADDITIONAL FILL MATERIAL CHARACTERIZATION SAMPLING

To further characterize the grids that were identified with impacted material, eight additional soil borings were advanced by EPI throughout the balance of the Site. The additional characterization soil borings were advanced within areas of uncharacterized, visually observed fill based on field observations by a representative from the NJDEP's BSWCE and Matrix. All soil borings were advanced to a depth of 4 feet bgs, with five-foot sampling cores using dedicated acetate sleeves with a Geoprobe. The soil was inspected for any potential visual or olfactory impacts, screened with a PID for organic vapors, and logged for material content and lithology. All additional characterization soil samples were collected at a depth of approximately 1.0 to 1.5 feet bgs, as field screening/observations indicated that interval was the bottom six inches of the imported fill material. There were no observations of elevated PID readings, odor, staining, or sheen throughout the soil column in any of the sample locations. Based on the approved NJDEP sampling workplan, eight soil samples (GRID-29 through GRID-36), were collected and submitted for TCL/TAL+30.

The samples are included on the summary table, **Table 1**. Soil boring locations and analytical results are shown on **Figure 4** and included in **Table 4**. Soil boring logs are provided in **Appendix E**.

Based on the analytical results, the additional characterization soil samples, GRID-29, GRID-30, GRID-32, GRID-33, GRID-35, and GRID-36, did not exhibit concentrations above applicable NJDEP SRS for VOCs, SVOCs, Pesticides, PCBs, and Metals. Soil samples, GRID-31 and GRID-34 exhibited concentrations (0.902 mg/kg and 1.06 mg/kg, respectively) of benzo(a)pyrene exceeding the NJDEP RIDSRS. GRID-31 and GRID-34 did not exhibit concentrations above applicable NJDEP SRS for any other compounds. Further investigation is recommended for the benzo(a)pyrene exceedances identified in the soil samples GRID-31 and GRID-34.

GRID SOIL/REMEDIAL INVESTIGATION – Additional VOC Sampling

To further understand potential VOC presence within the imported fill material and maintain compliance with applicable NJDEP CSRR requirements, additional VOC samples were collected and analyzed at sample locations that were originally sampled during the June 2024 grid site investigation. On November 26, 2024 seven soil borings were advanced at former sample locations GIRD-1, GRID-2, GRID-5, GRID-6, GRID-17, GRID-19, and GRID-25. These locations were selected based on the already acquired VOC data from the June 2024 sampling event to ensure that VOC analysis was collected throughout the entire Site. All soil borings were advanced with a Geoprobe to a depth of 4 feet bgs with five-foot sampling cores using dedicated acetate sleeves. The soil was inspected for any potential visual or olfactory impacts, screened with a PID for organic vapors, and logged for material content and lithology. All additional characterization soil samples were collected at depths of approximately 1.0 to 1.5 feet bgs. There were no observations of elevated PID readings, odor, staining, or sheen throughout the soil column in any of the sample locations. Seven samples were collected and submitted for TCL VOC+15 laboratory analysis.

The samples are included on the summary table, **Table 1**. Soil boring locations and analytical results are shown on **Figure 5** and **Table 5.** Along with the recently collected VOC samples, the previous sample locations and analytical results from the June 2024 site investigation are also included in **Table 5**. Soil boring logs are provided in **Appendix E**.

Based on the analytical results, the additional VOC characterization soil samples (GRID-1, GRID-2, GRID-5, GRID-6, GRID-17, GRID-19, and GRID-25) did not exhibit concentrations above applicable NJDEP SRS.

CONCLUSIONS

Based on the results of the RI sampling completed at the Site in November 2024, the boundaries of the delineation at grid locations GRID-16, GRID-18, and GRID-26 have been identified. Matrix recommends

excavation and offsite disposal to the extents identified in the RI. In an effort to minimize the volume of soil that will need to be removed from the site to satisfy BSWCE, Matrix recommends further investigation for grids: GRID-10A, GRID-11, GRID-20, GRID-21, and GRID-28 associated with the benzo(a)pyrene, benzo(a)anthracene, and/or mercury exceedances. In addition, Matrix recommends further investigation at sample location GRID-4R associated with the pesticide exceedance and GRID-31 and GRID-34 for the benzo(a)pyrene exceedance of the RIDSRS.

Based on the NJDEP's *Groundwater Technical Guidance: Site Investigation, Remedial, and Remedial Action Performance Monitoring*, the results of the soil sampling completed as part of this RI do not trigger a groundwater investigation. Matrix will coordinate with the Village of Ridgewood and the NJDEP to prepare a scope of work to continue to investigate soil contamination at the Site with the goal of developing a Remedial Action plan.

If you have any questions or require any additional information, do not hesitate to contact us at (973) 240-1800.

Sincerely,

Melissa Feury
Project Manager

Chris Pittarese, LSRP
Senior Project Manager

Notes:

All analytical results for soil in milligrams per kilogram (mg/kg)

All sample depths presented in ft, bgs

Site Specific Migration to Groundwater Soil Remediation Standard (MGWSRS) was calculated for benzo(a)anthracene using NJDEP's SPLP Spreadsheet, V1.0, May 2021.

Unsaturated soil samples compared to MGWSRS/AR-MGWSRS

* = AR-MGWSRS utilized as standard

ft, bgs= feet below ground surface

NA = Not Analyzed

NC = No criteria established for this contaminant

SVOCs = Semi-Volatile Organic Compounds

PCBs = Polychlorinated Biphenyls

SRS = Soil Remediation Standards Criteria

NJ-MGWSRS = New Jersey 2021 Migration to Groundwater Exposure Pathway Soil Remediation Standards Criteria

AR-MGWSRS = Alternative Remediation - Migration to Groundwater Soil Remediation Standard

NJ-RIDSRS = New Jersey 2021 Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

NJ-RISRS = New Jersey 2021 Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-NRIDSRS = New Jersey 2021 Non-Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

NJ-NRISRS = New Jersey 2021 Non-Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

Notes:

All analytical results for soil in milligrams per kilogram (mg/kg)

Site Specific Migration to Groundwater Soil Remediation Standard (MGWSRS) was calculated for benzo(a)anthracene using NJDEP's SPLP Spreadsheet, V1.0, May 2021.

ft, bgs= feet below ground surface

All sample depths presented in ft, bgs

[a] More than 40 % RPD for detected concentrations between the two GC columns.

[b] Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

[c] Associated CCV outside of control limits high, sample was ND.

[d] Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.

[e] Outside of in house control limits.

[f] Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only. More than 40 % RPD for detected concentrations between the two GC columns.

[g] Reported from 1st signal. Internal standard outside the limits on the 2nd signal.

[h] Reported from 1st signal. Internal standard outside the limits on the 2nd signal. More than 40 % RPD for detected concentrations between the two GC columns.

B = Indicates analyte found in associated method blank

J = Estimated concentration below laboratory reporting limit

NC = No criteria established for this contaminant

U = Denotes parameters analyzed for but not detected; value shown is the laboratory reporting limit

- = Not Analyzed

SVOCs = Semi-Volatile Organic Compounds

Unsaturated soil samples compared to MGWSRS/AR-MGWSRS

* = AR-MGWSRS utilized as standard

NJ-MGWSRS = New Jersey 2021 Migration to Groundwater Exposure Pathway Soil Remediation Standards Criteria

AR-MGWSRS = Alternative Remediation - Migration to Groundwater Soil Remediation Standard

NJ-NRISRS = New Jersey 2021 Non-Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-NRIDSRS = New Jersey 2021 Non-Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

NJ-RISRS = New Jersey 2021 Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-RIDSRS = New Jersey 2021 Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

Bold and italic	Reporting limit exceeds NJDEP's most stringent standard
Bold and italic	Exceeds the NJDEP MGWSRS/AR-MGWSRS
Bold	Exceeds NJDEP RIDSRS/RISRS
Bold and underline	Exceeds NJDEP NRIDSRS/NRISRS

Notes:

All analytical results for soil in milligrams per kilogram (mg/kg)

Site Specific Migration to Groundwater Soil Remediation Standard (MGWSRS) was calculated for benzo(a)anthracene using NJDEP's SPLP Spreadsheet, V1.0, May 2021.

ft, bgs= feet below ground surface

All sample depths presented in ft, bgs

[a] More than 40 % RPD for detected concentrations between the two GC columns.

[b] Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

[c] Associated CCV outside of control limits high, sample was ND.

[d] Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.

[e] Outside of in house control limits.

[f] Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only. More than 40 % RPD for detected concentrations b

[g] Reported from 1st signal. Internal standard outside the limits on the 2nd signal.

[h] Reported from 1st signal. Internal standard outside the limits on the 2nd signal. More than 40 % RPD for detected concentrations between the two GC columns.

B = Indicates analyte found in associated method blank

J = Estimated concentration below laboratory reporting limit

NC = No criteria established for this contaminant

U = Denotes parameters analyzed for but not detected; value shown is the laboratory reporting limit

- = Not Analyzed

SVOCs = Semi-Volatile Organic Compounds

Unsaturated soil samples compared to MGWSRS/AR-MGWSRS

* = AR-MGWSRS utilized as standard

NJ-MGWSRS = New Jersey 2021 Migration to Groundwater Exposure Pathway Soil Remediation Standards Criteria

AR-MGWSRS = Alternative Remediation - Migration to Groundwater Soil Remediation Standard

NJ-NRISRS = New Jersey 2021 Non-Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-NRIDSRS = New Jersey 2021 Non-Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

NJ-RISRS = New Jersey 2021 Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-RIDSRS = New Jersey 2021 Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

Bold and italic	Reporting limit exceeds NJDEP's most stringent standard
Bold and italic	Exceeds the NJDEP MGWSRS/AR-MGWSRS
Bold	Exceeds NJDEP RIDSRS/RISRS
Bold and underline	Exceeds NJDEP NRIDSRS/NRISRS

Notes:

All analytical results for soil in milligrams per kilogram (mg/kg)

Site Specific Migration to Groundwater Soil Remediation Standard (MGWSRS) was calculated for benzo(a)anthracene using NJDEP's SPLP Spreadsheet, V1.0, May 2021.

ft, bgs= feet below ground surface

All sample depths presented in ft, bgs

[a] More than 40 % RPD for detected concentrations between the two GC columns.

[b] Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

[c] Associated CCV outside of control limits high, sample was ND.

[d] Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.

[e] Outside of in house control limits.

[f] Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only. More than 40 % RPD for detected concentrations between the two GC columns.

[g] Reported from 1st signal. Internal standard outside the limits on the 2nd signal.

[h] Reported from 1st signal. Internal standard outside the limits on the 2nd signal. More than 40 % RPD for detected concentrations between the two GC columns.

B = Indicates analyte found in associated method blank

J = Estimated concentration below laboratory reporting limit

NC = No criteria established for this contaminant

U = Denotes parameters analyzed for but not detected; value shown is the laboratory reporting limit

- = Not Analyzed

SVOCs = Semi-Volatile Organic Compounds

Unsaturated soil samples compared to MGWSRS/AR- Reporting limit exceeds NJDEP's most stringent standard

* = AR-MGWSRS utilized as standard Exceeds the NJDEP MGWSRS/AR-MGWSRS

NJ-MGWSRS = New Jersey 2021 Migration to Groun Exceeds NJDEP RIDSRS/RISRS

AR-MGWSRS = Alternative Remediation - Migration t Exceeds NJDEP NRIDSRS/NRISRS

NJ-NRISRS = New Jersey 2021 Non-Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-NRIDSRS = New Jersey 2021 Non-Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

NJ-RISRS = New Jersey 2021 Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-RIDSRS = New Jersey 2021 Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

Notes:

All analytical results for soil in milligrams per kilogram (mg/kg)

Site Specific Migration to Groundwater Soil Remediation Standard (MGWSRS) was calculated for benzo(a)anthracene using NJDEP's SPLP Spreadsheet, V1.0, May 2021.

ft, bgs= feet below ground surface

All sample depths presented in ft, bgs

[a] More than 40 % RPD for detected concentrations between the two GC columns.

[b] Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

[c] Associated CCV outside of control limits high, sample was ND.

[d] Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.

[e] Outside of in house control limits.

[f] Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only. More than 40 % RPD for detected concentrations be

[g] Reported from 1st signal. Internal standard outside the limits on the 2nd signal.

[h] Reported from 1st signal. Internal standard outside the limits on the 2nd signal. More than 40 % RPD for detected concentrations between the two GC columns.

B = Indicates analyte found in associated method blank

J = Estimated concentration below laboratory reporting limit

NC = No criteria established for this contaminant

U = Denotes parameters analyzed for but not detected; value shown is the laboratory reporting limit

- = Not Analyzed

SVOCs = Semi-Volatile Organic Compounds

Unsaturated soil samples compared to MGWSRS/AR· Reporting limit exceeds NJDEP's most stringent standard

* = AR-MGWSRS utilized as standard Exceeds the NJDEP MGWSRS/AR-MGWSRS

NJ-MGWSRS = New Jersey 2021 Migration to Groun· Exceeds NJDEP RIDSRS/RISRS

AR-MGWSRS = Alternative Remediation - Migration t· Exceeds NJDEP NRIDSRS/NRISRS

NJ-NRISRS = New Jersey 2021 Non-Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-NRIDSRS = New Jersey 2021 Non-Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

NJ-RISRS = New Jersey 2021 Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-RIDSRS = New Jersey 2021 Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

Notes:

All analytical results for soil in milligrams per kilogram (mg/kg)

ft, bgs= feet below ground surface

All sample depths presented in ft, bgs

[a] More than 40 % RPD for detected concentrations between the two GC columns.

[b] Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

[c] Associated CCV outside of control limits high, sample was ND.

[d] Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.

[e] Outside of in house control limits.

[f] Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only. More than 40 % RPD for detected concentrations between the two GC columns.

[g] Reported from 1st signal. Internal standard outside the limits on the 2nd signal.

[h] Reported from 1st signal. Internal standard outside the limits on the 2nd signal. More than 40 % RPD for detected concentrations between the two GC columns.

B = Indicates analyte found in associated method blank

J = Estimated concentration below laboratory reporting limit

NC = No criteria established for this contaminant

U = Denotes parameters analyzed for but not detected; value shown is the laboratory reporting limit

- = Not Analyzed

Unsaturated soil samples compared to NJDEP's May 2021 Default Migration to Groundwater Soil Remediation Standards

NJ-MGWSRS = New Jersey 2021 Migration to Groundwater Exposure Pathway Soil Remediation Standards Criteria

NJ-NRISRS = New Jersey 2021 Non-Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-NRIDSRS = New Jersey 2021 Non-Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

NJ-RISRS = New Jersey 2021 Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-RIDSRS = New Jersey 2021 Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

Bold and italic	Reporting limit exceeds NJDEP's most stringent standard
Bold and italic	Exceeds the NJDEP MGWSRS/AR-MGWSRS
Bold	Exceeds NJDEP RIDSRS/RISRS
Bold and underline	Exceeds NJDEP NRIDSRS/NRISRS

Notes:

All analytical results for soil in milligrams per kilogram (mg/kg)

Site Specific Migration to Groundwater Soil Remediation Standard (MGWSRS) was calculated for lead and mercury using NJDEP's SPLP Spreadsheet, V1.0, May 2021.

ft, bgs= feet below ground surface

All sample depths presented in ft, bgs

NC = No criteria established for this contaminant

U = Denotes parameters analyzed for but not detected; value shown is the laboratory reporting limit

- = Not Analyzed

Unsaturated soil samples compared to MGWSRS/AR-MGWSRS

* = AR-MGWSRS utilized as standard

AR-MGWSRS = Alternative Remediation - Migration to Groundwater Soil Remediation Standard

NJ-MGWSRS = New Jersey 2021 Migration to Groundwater Exposure Pathway Soil Remediation Standards Criteria

NJ-NRISRS = New Jersey 2021 Non-Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-NRIDSRS = New Jersey 2021 Non-Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

NJ-RISRS = New Jersey 2021 Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-RIDSRS = New Jersey 2021 Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

Bold and italic	Reporting limit exceeds NJDEP's most stringent standard
Bold and italic	Exceeds the NJDEP MGWSRS/AR-MGWSRS
Bold	Exceeds NJDEP RIDSRS/RISRS
Bold and underline	Exceeds NJDEP NRIDSRS/NRISRS

Notes:

All analytical results for soil in milligrams per kilogram (mg/kg)

Site Specific Migration to Groundwater Soil Remediation Standard (MGWSRS) was calculated for benzo(a)anthracene using NJDEP's SPLP Spreadsheet, V1.0, May 2021.

ft, bgs= feet below ground surface

All sample depths presented in ft, bgs

[a] Associated CCV outside of control limits high, sample was ND.

[b] Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.

B = Indicates analyte found in associated method blank

J = Estimated concentration below laboratory reporting limit

NC = No criteria established for this contaminant

U = Denotes parameters analyzed for but not detected; value shown is the laboratory reporting limit

- = Not Analyzed

SVOCs = Semi-Volatile Organic Compounds

Unsaturated soil samples compared to MGWSRS/AR-MGWSRS

* = AR-MGWSRS utilized as standard

NJ-MGWSRS = New Jersey 2021 Migration to Groundwater Exposure Pathway Soil Remediation Standards Criteria

AR-MGWSRS = Alternative Remediation - Migration to Groundwater Soil Remediation Standard

NJ-NRISRS = New Jersey 2021 Non-Residential Inhalation Exposure Pathway Soil Remediation Standards Criteria

NJ-NRIDSRS = New Jersey 2021 Non-Residential Ingestion-Dermal Exposure Pathway Soil Remediation Standards Criteria

RE: Ridgewood Village Historic Site at 460 West Saddle River Road
Issues with reported data associated with imported fill
EA ID#: U4347

Gentlemen:

The following evaluation of the analytical data reportedly associated with the soils imported to the referenced site reiterates information from Mr. Chris Rutishauser, Ridgewood Village's Director of Public Works/Village Engineer, followed by a response from NJDEP's Bureau of Solid Waste Compliance & Enforcement (BSWC&E). Further appropriate actions necessary to pursue closure of this solid waste case are also presented.

Ridgewood Explanation for South Broad Street Fill Source:
"I visited this site when the offer of the soil became available. I did not observe an[y] indications of contamination in the soils. The development that generated the material was reviewed by the Village's planning board, for which I am the licensed review engineer. The material required and received a Village of Ridgewood major soil moving permit (planning board approves the permit followed by Village Council approval of the permit). Testing was done on the material in 2018 by Peak Environmental. Peak estimated the quantity of soil at 8,000 cubic yards. Peak collected 14 samples for testing under a reduce[d] sample quantity due to justification. Peak did not note any impacts to the soils sampled. The first three pages of their report submitted explains their protocol and observations. We used this soil as the bulk of the material for the berm construction. The berm was constructed by the Village's Streets Division using several of the Village's rubber tire front end loaders."

BSWC&E Response for Ridgewood Dayton, LLC – 152 South Broad Street fill source:
The estimated 8,000 cubic yard soil source was indicated to be from excavations associated with the demolition of a building at a site that underwent remediation. No description of the remediation nor the potential of environmental impacts from the remediated discharge(s) to have impacted the soils taken to 460 Saddle River Road were discussed, yet the sampling and analyses protocol was reduced by relying on such data to reduce the analytical frequencies per cubic yard as compared to the NJDEP Guidance Document: "Fill Material Guidance for SRP Sites". Based on yet to be explained judgements, the analytical parameters were also further reduced. For example, for a volume of 8,000 cubic yards the aforementioned guidance document suggests that 21 samples be collected and analyzed unless information can be used to reduce such frequency to 14 samples to be analyzed. Yet, the consultant secured analyses from only 4 samples for polychlorinated biphenyls (PCBs, a.k.a. "Aroclors") and only 4 samples for pesticides while providing 14 samples for analyses for EPH, PAHs and Metals. While only 5 samples were analyzed for volatile organic compounds (VOC), field screening using a photoionization detector (PID) revealed no responses and therefore the BSWC&E does not disagree with the limitation of the VOC analyses. However, an explanation regarding the use of the reduced sampling frequencies and further reduction of analytes below those noted in NJDEP guidance has not been provided.

The Conformance/Non-Conformance Summary within the laboratory report submitted to the BSWC&E revealed that, while the instrumentation was operating correctly, sample matrix interference was observed which caused the surrogate recoveries of several of the metals analyzed via method 6010D and several of the semi-volatile organic compounds to produce analytical data which may be biased low.

Ridgewood Explanation for Bergen Community College Site fill source:
"Through a contact, Bergen Community reached out to the Village and inquired if we would like some fill soil. I examined the soils at the college. I did not observe any indication of contamination. On September 27, 2019 ANS Consultants collected 5-point grab samples and subjected them to laboratory analysis. Laboratory results indicated the soils were suitable for the intended use at the Schedler site. The Village received approximately 500 cubic yards of material from the college."

BSWC&E Response for Bergen County Community College fill source:
No discussion on the reason for the excavation at this site was provided. The volume of soil represented by the 5-point composite to one sample is reported at 500 cubic yards. Compositing of such sample, although not preferred, may be acceptable, depending upon the reason for the excavation. The cover letter to the tabulated data indicates that the Department (NJDEP) does not require the Mercury found at 0.615 ppm, which is over the Migration to Ground Water Standard of 0.1 ppm as noted in N.J.A.C. 7:26D, to be addressed unless there is cause to believe that its presence is due to a discharge. However, such policy is applicable only for background conditions or historical fill scenarios where the subject fill is proposed to remain in place and does not address the movement of such fill to another site without a requisite evaluation of the potential impacts of such fill material. That is, the property at 460 Saddle River Road was not undergoing a remediation approved by a Licensed Site Remediation Professional (LSRP) retained pursuant to N.J.A.C. 7:26C at the time the fill was imported. As such, fill was not integrated into a remedial process pursuant to the "Like on Like" – 75 percentile assessment as noted in N.J.A.C. 7:26E-5.2 nor was a site-specific Migration to Ground Water pathway soil remediation standard established pursuant to N.J.A.C. 7:26D. Accordingly, no information has been presented to justify bringing in contaminated fill to a site that may have been uncontaminated prior to the importation of the subject fill materials.

The area(s) at the 460 Saddle River Road site where these soils were distributed are currently unknown to the BSWC&E. Further, there was no laboratory report or Non-Conformance Summary submitted with this data, therefore the integrity of the analytical results cannot be evaluated if limited to the information provided.

Ridgewood Explanation for 533 Wyndmere fill source:
"This location was a residential house that was constructing a large addition and reached out to us to see if we were interested in their surplus material. I examined the soil in the field. It was a fine to medium sand, trace silt and would be excellent grading fill for the Schedler project. The site's soil moving permit indicated approximately 280 cubic yards of cut and 40 cubic yards of fill. ANS Consultants collected one sample and subjected it to laboratory analysis on or about May 19, 2021. The results were acceptable for the intended use of the material."

BSWC&E Response for 533 Wyndmere fill source:
One sample from 320 cubic yards of soil and fill excavated from a residential home was analyzed for Target Analyte List and Target Compound List compounds for which the results did not indicate a concern.

The area(s) at the 460 Saddle River Road site where these soils were distributed are currently unknown to the BSWC&E.

There was no laboratory report or Non-Conformance Summary submitted with this data, therefore the integrity of the analytical results cannot be evaluated if limited to the information provided.

Ridgewood Water DeBoer Avenue and Route 208 Water Main Installation:
"Trench spoil from this project was made available. On August 9, 2021 Aqua Pro-Tech Laboratories tested one grab sample. The soil was found to be acceptable for its intended use. The site provided approximately 200 cubic yards of fill. This is the one location I did not personally observe the material at its generating source."

BSWC&E Response for Ridgewood Water DeBoer Ave and Rt. 208 Water Main Installation:
It appears that one sample from a reported 200 cubic yard source was analyzed for volatile organic compounds, metals, PCBs and pesticides. No Chain of Custody was submitted. It is not known when the date of analysis was. There was no Non-Conformance Summary submitted with this data, therefore the integrity of the analytical results cannot be completely evaluated if limited to the information provided.

However, a concern is noted for sample # 1080405-01 as it displayed a benzo[a]pyrene concentration of at least 0.48 parts per million (ppm) while the Residential Ingestion-Dermal pathway soil remediation standard for this compound is 0.51 ppm. Although the reported result is below the Residential Soil Remediation Standard that triggers the definition of solid waste, because this sample was diluted, presumably to rectify some matrix interference, the result is biased low.

This sample also displayed a mercury concentration of 0.105 ppm. N.J.A.C. 7:26D denotes a Migration to Ground Water pathway standard for Mercury of 0.1 ppm.

This sample also displayed a benzo[a]anthracene concentration of at least 2.60 ppm while N.J.A.C. 7:26D denotes a Migration to Ground Water pathway standard for this compound is 0.71 ppm.

Again, without LSRP interaction pursuant to N.J.A.C. 7:26 C, there was no evaluation of the appropriateness of bringing in contaminated fill to the 460 West Saddle River Road site.

The location(s) where this fill was distributed at 460 West Saddle River Road site has not been disclosed to the BSWC&E.

Ridgewood Explanation for Water Main Replacement Jefferson, William and Salem Streets fill source:
"The source of this material was the spoil from a water main replacement project in the following Village streets: Jefferson Street, William Street, and Salem Street. Work was done by a contractor working for Ridgewood Water Company. I observed the trenching work on several occasions. I did not note any contamination concerns. Three samples were collected, one from each street, and tested by Aqua Pro-tech Laboratories on or about September 22, 2020. Trench was approximately 4,100 linear feet, 2.5-feet wide and 4.5-feet deep for a volume of approximately 1,700 cubic yards of soil."

BSWC&E Response for Jefferson, William and Salem Streets fill source:
There was no Non-Conformance Summary submitted with this data, therefore the integrity of the analytical results cannot be completely evaluated if limited to the information provided.

Ridgewood Explanation for the Ridgewood Water Company Spoil Pile:
"The Village's Water Company had excess soil from their water main break repairs. On January 12, 2021 SGS North America collected three grab soil samples for analysis. This testing was a follow up to testing Eurofins had done on December 22, 2016 of a single grab sample of soil. With the test results being acceptable for use, the Village trucked approximately 300 cubic yards of material from the spoil pile to Schedler. I observed this spoil pile before it was trucked and did not note any indications of contamination."

SWC&E Response for the Ridgewood Water Company Spoil Pile:
The 2016 sample results revealed detection limits that were higher than the remediation standards. For example, the sample analyzed for benzo[a]pyrene was diluted ten-fold yielding a detection limit of 0.94 ppm while the Residential Ingestion-Dermal pathway remediation standard for this compound is 0.51 ppm. Further, the laboratory Case Narrative disclosed surrogate recovery issues with several organic compounds and metals. The follow-up analyses reported for the subject materials revealed that benzo[a]anthracene was detected in sample S-15R at 0.75 ppm which is above the Migration to Ground Water Pathway soil remediation standard for this compound which is 0.71 ppm. Further, benzo[a]pyrene in this sample was reported at a concentration of 0.744 ppm while the Residential Ingestion-Dermal Pathway remediation standard for this compound is 0.51 ppm, thus triggering the definition of solid waste. Sample S-18R revealed similar elevated concentrations of benzo[a]anthracene of 0.873 ppm and 0.852 ppm respectively. BSWC&E's interpretation of the Case Narrative/Conformance Summary did not raise concerns regarding the accuracy of the compounds found at concentrations over the noted remediation standards.

No locations where the subject materials were deposited have been provided. Further, given the exceedance of the remediation standards, no explanation regarding the suitability of the subject material for the 460 West Saddle River Road site was provided.

REQUIRED FURTHER ACTIONS TO DOCUMENT FILL QUALITY:

Berm Along Route 17:

With respect to the soils used to construct the berm, the following actions are necessary to further evaluate the suitability of such materials for the site at 460 Saddle River Road:

1. Provide a detailed explanation describing how the previous analytical data collected for the remediation case that was the source of the fill along with the physical distances or barriers between the contaminated materials and the materials brought to the 460 West Saddle River Road site to justify employing a reduction in the analytical frequencies published in NJDEP guidance.

2. Assuming that, in the opinion of the BSWC&E, such explanation is acceptable, provide a Sampling and Analysis Plan (SAP) that incorporates the following scope of work: collect ten discrete grab (non-composited) samples from the soil berm at equally distributed aerial and vertical locations representing a full cross section of the berm. Using an NJDEP certified laboratory who are also certified by the NJDEP for the test methods employed, analyze each of these samples for those Pesticides and PCBs from the Target Compound List and in accordance with the test methods noted therein as defined in N.J.A.C. 7:26E-1.8. Further, for the data already submitted to the BSWC&E, perform a comprehensive review of the Conformance/Non-Conformance Summary to determine which samples displayed biased low results for metals and semi-volatile organic compounds and add such analytes to similarly equally spaced samples such that there will be at least 14 samples representing Target Analyte List metals and Target Compound List semi-volatile organics, each as defined and in accordance with the analytical procedures noted in N.J.A.C. 7:26E-1.8, for which reliable data is generated. Provide a detailed explanation on this review and analyte selection process. For the purposes of compliance with the solid waste issue, it is not necessary to perform analyses for Tentatively Identified Compounds.

   The SAP shall include a scaled site map noting the proposed sampling locations and analytical parameters. The plan should not be implemented until approved in writing by the BSWC&E.

Other Imported Fill Areas of Deposition:

With respect to the soils/fill deposited in other areas of the property at 460 West Saddle River Road, the BSWC&E has observed that such fill contains materials that, at least from a geotechnical consideration, may not be suitable base material for the artificial turf which the BSWC&E understands is being contemplated for this site. As such, should any of the fill deposited outside of the berm be removed from the property, appropriate characterization of same is needed to ensure that it's use, or disposal is consistent with NJDEP regulations. If any of this fill is contemplated to remain in place, without knowing the locations of the deposition of the various sources of the fill material and because the data for at least some of the fill material is suspect, the aforementioned SAP should be expanded to incorporate sampling of the remaining areas of imported fill deposition. Such expanded plan should incorporate a scaled site map depicting a grid pattern denoting where discrete (non-composited) samples will be collected for analyses for Target Analyte List and Target Compound List analytes as defined and in accordance with the analytical methods noted in N.J.A.C. 7:26E -1.8 (minus volatile organic analyses if appropriate soil gas screening confirms such analyses is not necessary). The expanded SAP should not be implemented until approved in writing by the BSWC&E.

Case Management:

In order to close the solid waste issue associated with the imported fill materials, any such fill that exceeds the Residential Ingestion-Dermal/Inhalation soil remediation standards (without performing data averaging) must be removed. Accordingly, following review of the data to be generated from the SAP, the BSWC&E will advise Ridgewood Village of the scope of work needed to incorporate into a Corrective Action Plan (CAP) designed to address any residual solid waste as determined by both the physical and chemical triggers noted in N.J.A.C. 7:26 -1.6(a)6. The CAP should not be conducted until approved in writing by the SWC&E.

Once the BSWC&E is satisfied that appropriate removal of the fill materials that trigger the definition of solid waste at N.J.A.C. 7:26-1.6(a)6 has been achieved, a letter will be issued noting that the subject solid waste issue has been resolved.

Please note that the BSWC&E does not offer opinions on whether or not a site has been remediated or if a site is suitable to allow leaving fill materials in place that do not trigger the definition of solid waste, but have a contaminant within them at a concentration greater than the respective default Migration to Ground Water soil remediation standard at N.J.A.C. 7:26D. Accordingly, if it is desired to pursue further evaluation of the suitability to leave such soils in place, alternative, site specific Migration to Ground Water pathway standards can be generated as afforded by N.J.A.C. 7:26D if approved by a Licensed Site Remediation Professional (LSRP) retained pursuant to the Administrative Requirements for the Remediation of Contaminated Sites as noted in N.J.A.C. 7:26C. Accordingly, Ridgewood Village may want to consider performing additional testing approved by such LSRP to address such pathway during the mobilization addressing the requisite sampling to further evaluate the solid waste issues.

Enforcement:

Please be advised that Ridgewood Village's documented use of contaminated fill at this site is in violation of the Solid Waste Management Act, particularly N.J.A.C. 7:26-2.8(e). As such, the BSWC&E expects full cooperation from Ridgewood Village at this time to facilitate the BSWC&E's discretionary authority to minimize any enforcement actions/penalty assessments. **As such, please provide the requisite Sampling and Analysis Plan within sixty (60) days upon receipt of this correspondence.**

Attached to this letter please find generic guidance from the BSWC&E addressing our expectations associated with data collection. Should you have any questions, please promptly contact me.

Regards,

Tom Farrell, Chief
Bureau of Solid Waste Compliance & Enforcement

DATA REVIEW DOCUMENTATION FORM

 (last updated October 2023)

The following information should accompany analytical data submitted to the Bureau of Solid Waste Compliance and Enforcement (BSWC&E) for a determination that is limited to whether or not the materials represented by such data trigger the definition of solid waste pursuant to N.J.A.C. 7:26 - 1.6(a)6. BSWC&E's acknowledgement of such data shall not be construed to suggest that the New Jersey Department of Environmental Protection considers that the site represented by this data has been fully remediated in whole or in part. As this form is not designed for any one particular site, not all sections may be applicable.

☐ Current Name and Address of site:

_____

_____

☐ Specific Historical uses of property:

_____

_____

☐ Mapped on NJ GeoWeb as located in an area of Historical Fill? _____

☐ Have the subject materials been in contact with any construction and demolition debris or historical discharge of a hazardous substance or historical fill? _____

SAMPLE COLLECTION INFORMATION:

☐ Was the sampling conducted in conformance with the Technical Requirements for Site Remediation at N.J.A.C. 7:26E and the most recent version of the NJDEP Field Sampling Procedures Manual? _____. If no, please explain:

_____

_____.

☐ Was the sampling conducted to address a known volume of materials? _____ If so, what is the total volume of materials addressed by this project? _____ cubic yards.

☐ If the sampling addressed an area wherein the volume of potentially contaminated materials was not known, how many square feet is such Area of Concern? _____ square feet.

☐ **Only for sites where no VOCs are expected:** Were Target Compound List Volatile Organic Compounds (VOCs) eliminated from the analyses based on the response from a photoionization detector (PID)? _____

- If a PID was used, how, when and by whom was it calibrated (please include the type of calibration gas used)?

_____

_____

- What was the eV value of the bulb used in the PID? _____.
- At what units in parts per million (ppm) of response on the PID was the fill considered to not require analysis for VOCs?_____ .

Describe the process used to screen the materials with the PID. If screening was conducted within in situ materials, please include areal frequency in square feet and depths (from surface grade). If screening was conducted within stockpiled materials, please include the distances within the stockpile and frequency of screening per cubic yards.

_____

_____.

☐ If other information was used to eliminate volatile organics from the testing methods of the subject fill besides PID screening, please note same here:

Please complete the following table:

Analytical Group	**Analytical Frequency per cubic yard of stockpiled materials (if applicable)**	**Analytical Frequency per square foot of in situ materials in Area of Concern (if applicable)**	**Reason for Noted Analytical Frequency**
Target Analyte Metals			
Target Compound List Volatile Organic Compounds			
Target Compound List Semi- Volatile Organic Compounds			
Target Compound List Pesticides			
Target Compound List PCBs			

☐ Has a Sample Location Map been provided noting the sample identification numbers in a manner that one who had not seen the site could readily understand where the samples were collected?

☐ If there was any deviation from the Department's most recent version of the Guidance Documents: *Fill Materials Guidance for SRP Sites, October 2021* or *Understanding DEP's Requirements for Soil and Fill Materials*, please provide your justification for same here:

SAMPLE ANALYSIS INFORMATION:

☐ List the name and the New Jersey Laboratory Certification number(s) for the laboratory(ies) used:

_____.

☐ Were there any analyses conducted for which the laboratory did not have a specific New Jersey certification to perform same (note: In addition to the NJ Laboratory Certification, laboratories are required to hold a certification from NJDEP for each analytical method)?
If yes, please specify which test method and affected analytes was/were not certified by NJDEP: _____.

☐ Has the analyses been performed in accordance with N.J.A.C. 7:26E-2 and accompanied by the applicable Reduced Regulatory Deliverables pursuant to Attachment A-II of N.J.A.C. 7:26E? _____.

☐ Does each laboratory report contain a summary of the samples received noting any deficiencies with, at a minimum: temperature of the samples upon receipt, condition of the sample bottles, appropriate Chain of Custody documentation, compliance with sample holding times? If any such deficiencies were noted, please list them here:

_____

_____.

☐ Was a Conformance/Non-Conformance Summary included for each laboratory report? _____

☐ Did the Conformance/Non-Conformance Summary suggest data that could not be relied upon? _____. If yes, please specify which analytes for which samples were not usable:

_____

_____.

☐ Has any data averaging been employed in an Area of Concern to generate the conclusions drawn? _____If so, specify which Area of Concern employed data averaging and include the computations for same in the report of findings.

☐ Has the data been tabulated with comparison to NJDEP Remediation Standards at N.J.A.C. 7:26D? _____

Per my signature below, I certify that the information provided on this form is true and accurate to the best of my knowledge.

Print name of person completing this form: _____;sign:_____;date:_____

STANDARD SAMPLING and ANALYSES PLAN APPROVAL

Project Name:
NJEMS PI#:
Date of S&AP:

The following document contains standard conditions and limitations that accompany any communication from the Bureau of Solid Waste Compliance and Enforcement (BSWC&E) which indicate approvals of Sampling and Analysis Plans. Unless otherwise appended to or altered by official written correspondence from the BSWC&E, these conditions and limitations shall apply.

1.) This approval is limited to determine whether or not the soil/fill materials being sampled meet the portion of the definition of solid waste that addresses contaminant concentrations as referred to in N.J.A.C. 7:26-1.6(a)6. As such, analytical results from **any one** sample that indicate concentrations of contaminants that are above the Residential Ingestion-Dermal or Residential Inhalation soil remediation standards at N.J.A.C. 7:26 D are indicative of solid waste. While delineation of such contamination is acceptable with a plan approved by BSWC&E, **no compliance averaging** is accepted.

2.) The BSWC&E does not make determinations regarding whether or not soils or materials can be considered as Clean Fill pursuant to N.J.A.C. 7:26E -1.8. As such, upon receipt of acceptable data that indicates contaminant concentrations that are compliant with the definition of solid waste at N.J.A.C. 7:29-1.6(a)6, the BSWC&E will acknowledge same by noting compliance has been achieved with respect to the particular solid waste violation associated with the quality of the soil/fill materials. The BSWC&E does not make determinations regarding whether or not a site has been remediated.

3.) All sampling must be performed in accordance with the latest version of the NJDEP's Field Sampling Procedures Manual and N.J.A.C. 7:26 E – The Technical Requirements for Site Remediation.

4.) All analyses must be performed by a laboratory that has at least the following two certifications:

   a.) Overall Laboratory Certification from the State of New Jersey; and, (b) Certification from the State of New Jersey for the particular test method being employed.

Project Name:
NJEMS PI#:
Date of S&AP:

5). Any proposed analytes shall incorporate the test methods associated with EPA's Contract Laboratory Program (CLP) and shall be those analytes included in the respective Target Analyte List (TAL) or Target Compound List (TCL) of the CLP. For example, any proposal to analyze for "Metals" shall be inclusive of all metals in the TAL. It is not necessary to include Tentatively Identified Compounds (TICs) when analyzing for TCL compounds. BSWC&E does not interpret Extractable Petroleum Hydrocarbon (EPH) data.

6.) The Quality Assurance Plans shall incorporate quality control provisions and report same that are at least as comprehensive as the Reduced Regulatory Deliverables pursuant to Attachment A-II of N.J.A.C. 7:26 E. The locations of the Laboratory Non-Conformance Summary, Sample Receipt Form and Chain of Custody shall be readily identified in the laboratory report.

7.) To expedite the BSWC&E's data review, in addition to the full scale laboratory report, a separate table shall be submitted which compares the data to the Residential Ingestion-Dermal and Residential Inhalation soil remediation standards at N.J.A.C. 7:26D. In order to facilitate the BSWC&E determination on whether or not the site needs to be referred to the Department's Site Remediation Program, the data should also be compared to the default Migration to Ground Water pathway soil remediation standards at N.J.A.C. 7:26D. Any comparison to a site specific Migration to Ground Water pathway soil remediation standard would not be performed by the BSWC&E. Further, if the site is located in a wetlands or other area of ecological significance, the analytical results should also be compared to the Ecological Screening Criteria.

Place an "X" or appropriate number next to the applicable statement(s):

8.) The proposed sampling frequency is: ____ acceptable as proposed; _____ needs to be increased to one sample per ____ cubic yards (for sampling the subject fill) or, one sample per ___ square feet (for post-excavation analyses).

9.) The proposed analytes are: ____ acceptable as proposed; ____ needs to include all of the TAL metals; _____ needs to include all of the TCL semi-volatile organics; ___ needs to include all of the TCL pesticides; ____needs to include all of the TCL PCBs; ___ needs to include all of the TCL VOCs.

10.) The proposed field screening for volatile organic compounds (VOCs): ____ is acceptable as proposed; _____must perform field screening with the stated instrument at intervals of ___ cubic yards or ____ square feet (if post excavation sampling); ____ must provide documentation of proper calibration; ___ if a photoionization detector is to be used, must specify the electron voltage of the bulb used.

Plan Approved By: _____

RE: Conditional Approval of Grid Sampling Scope of Work dated June 18, 2024 addressing imported fill at 460 West Saddle River Road, Ridgewood Village

Dear Messrs. Kazmark and Rutishauser and Ms. Feury,

The Bureau of Solid Waste Compliance & Enforcement (BSWC&E) has completed reviewing the referenced Scope Work (SOW) and herein approves same in accordance with the following conditions:

1. The BSWC&E's review of the subject SOW is limited to facilitating the determination of compliance with the Solid Waste Management Act (SWMA). Accordingly, should the results of this investigation indicate that the definition of solid waste at N.J.A.C. 7:26-1.6(a)6 has not been chemically triggered, the BSWC&E will acknowledge same. It should be noted, however, that the surficial observations of discarded plastic, steel, asphalt, concrete and other solid wastes observed amongst the trees, particularly concentrated north of the site access driveway, would still need to be addressed. As the BSWC&E understands that such area is proposed to be developed with an artificial turf, it stands to reason that, regardless of the results of this investigation, such solid wastes would need to be removed in order to provide sufficient geotechnical support. Further, all physical solid waste throughout the site will need to be removed. The Department has established a policy that a site should not contain more than 1% by volume of visual solid waste.

2. Although the investigation regarding the presence or absence of solid waste and any corrective actions deemed necessary to address same are under the direct oversight of the BSWC&E, the conditions noted in this letter should not be construed to limit or replace any data collection needs that a Licensed Site Remediation Professional (LSRP) retained for this site pursuant to N.J.A.C. 7:26C may require in order to pursue a Response Action Outcome (RAO). Accordingly, it is up to such LSRP to collect any

additional samples at existing or additional sample locations and/or prescribe additional analytes to generate the data that they believe is necessary to support a conclusion regarding the need for remediation beyond addressing the solid waste.

3. A representative from the BSWC&E will be on-site to observe the sample collection. For the purposes of complying with the SWMA, as long as sampling can be safely conducted, such representative has the authority to direct sample locations within the grid patters established to areas of suspected contamination based upon current conditions observed in the field and/or identification of suspect areas found on aerial photographs. It is up to the Village of Ridgewood to ensure that the locations of all subsurface utilities are appropriately marked to facilitate identification of same.

4. In order to comply with the SWMA, the BSWC&E requires sampling of only the imported fill materials. Accordingly, the BSWC&E considers collection of samples in the native soils as additional data associated with overall site remediation goals. As such, while sampling of the native soils beneath the berm may assist the LSRP in their pursuit of a RAO, such samples would not comport to the sampling frequency specified by the BSWC&E. Therefore, those samples that Matrix has identified as being collected in the native soils beneath the berm, that is, samples GRID-9, GRID-21, GRID-22 and GRID-28, are not counted as requisite grid pattern samples. Accordingly, four additional soil samples should be collected within the imported fill within these grids that is not part of the soil berm.

5. While the SOW states that borings will be advanced up to depths of five feet, in order to address the solid waste concerns, the SWC&E requires at least one sample collected from such borings to be taken within the imported fill materials rather than the native soils. Data generated from any sampling of the native soils would be considered as applicable to the aforementioned LSRP's pursuit of a RAO for this site.

6. The BSWC&E considers the sample to be collected for volatile organic analysis (VOA) in GRID-9 to be associated with the berm sampling and not to replace a necessary grid sample. Further, this follow-up berm sample shall be collected within 12 -18 inches horizontally and at the same depth of the sample that indicated the elevated photoionization detector (PID) reading recorded on May 3, 2024.

7. A separate sample of imported fill not within the berm shall be collected within GRID-9 for Target Analyte List/Target Compound List (TAL/TCL) compounds. While the TCL compounds for this additional sample location may omit VOA analyses per the screening criteria noted in the SOW, at the conclusion of this grid sampling at least one sample shall be analyzed for the VOA portion of the TCL to confirm the accuracy of the PID. Such sample shall be selected by the highest PID reading

observed, or, if no PID readings are observed, via visual or olfactory suggestions or best judgement of a possible discharge of hazardous substances.

8. To minimize the potential for loss of soil gas, the prescribed PID readings shall be collected immediately upon opening the direct push recovery sleeves or soil boring cores.

9. A copy of the PID calibration log shall be provided with the completed Report of Findings.

10. The Report of Findings shall include boring logs which describe the materials encountered, note the PID readings recorded and depth(s) of sample collection.

11. Unless otherwise stated herein, all sampling and analyses shall be conducted in accordance with the NJDEP Field Sampling Procedures Manual and the Technical Requirements for the Site Remediation at N.J.A.C. 7:26E.

12. All laboratory analyses shall be performed by NJDEP Certified Laboratories who also have NJDEP certifications for the test methods to be employed.

13. To augment the laboratory's Non-Conformance Summary, a statement of interpretation of the usability of the data, based on a review of the findings in the Non-Conformance Summary, shall be provided. Please note that the laboratory should denote the specific compounds that may be outside of Quality Control limits.

14. The analytical results of compounds over the soil remediation standards at N.J.A.C. 7:26D shall be plotted on a scaled site map noting the locations of the corresponding samples. To facilitate a referral to the Department's Contaminated Site Remediation & Redevelopment Program, the data should be compared to all remediation standards.

15. A Corrective Action Plan shall be submitted to address the contamination found that triggered the definition of solid waste during the May 3, 2024 sampling event as well as to address all solid waste at this site.

16. As of the writing of this conditional approval letter, the BSWC&E has not received the Report of Findings for the sampling that took place on May 3, 2024. Accordingly, this conditional approval should not be construed to mean that the BSWC&E agrees that this grid sampling will serve to delineate the contamination generated from such sampling event. The BSWC&E presumes that details on how to delineate and remediate the soil berm contamination will be included in the Corrective Action Plan for this site.

17. In order to avoid unnecessary expense, it is recommended that the Village of Ridgewood's consultant discuss corrective action plans with the BSWC&E prior to submitting a plan for same.

Should you have any questions, please contact the undersigned.

Regards,
Tom Farrell, CHMM, Chief,
Bureau of Solid Waste Compliance & Enforcement

C: Dave Ongaro, SWC&E
Gina Lugo, SWC&E

1.0 SITE HISTORY

The Site is located at 460 West Saddle River Road in Ridgewood, Bergen County, New Jersey. As part of redevelopment activities, soils were imported to the Site for the creation of a soil berm along the western side of the Site and general site filling. Based on correspondence between the Village of Ridgewood (the Village) and the NJDEP's Bureau of Solid Waste Compliance & Enforcement (BSWC&E) in December 2023, the source and quality (i.e., alternative fill or clean fill) of the material was brought into question.

On May 3, 2024 Matrix performed a soil investigation on the Berm portion of the Site. Several sample locations were identified with concentrations of benzo(a)anthracene, lead, and mercury exceeding the NJDEP's Migration to Groundwater Soil Remediation Standard (MGW-SRS). Additionally, concentrations of benzo(a)pyrene were detected exceeding the NJDEP's Residential Ingestion-Dermal Soil Remediation Standard (RIDSRS) in several samples. Matrix notified the NJDEP via the NJDEP's Spill Hotline on May 28, 2024 regarding the exceeding concentrations. NJDEP assigned Case No. 24-05-28-1117-27 and Program Interest Number 1062723 to the Site. A Synthetic Participation Leaching Procedure (SPLP) was performed for benzo(a)anthracene, lead, and mercury and Site-Specific Migration to Groundwater Alternative Remediation Standards (MGWARS) for each were calculated utilizing the SPLP results. Concentrations of benzo(a)anthracene, lead, and mercury detected in the fill material were below their respective Site-Specific MGWARS.

On June 26 and June 27, 2024 Matrix performed a soil investigation on the balance of the Site. The soil investigation identified the SVOC compound, benzo(a)pyrene exceeding the NJDEP's RIDSRS or NRIDSRS, benzo(a)anthracene and mercury NJDEP's MGWSRS and Site-Specific MGWARS. Based on the results of the sampling completed on the Site on June 26 and 27, 2024, Matrix will conduct further investigation including delineation sampling at the locations of the samples exceeding NJDEP's RIDSRS, NRIDSRS, and Site-Specific MGWARS in an effort to minimize the volume of soil that will need to be removed from the Site to satisfy the NJDEP BSWC&E.

2.0 SAMPLING PLAN

2.1 Scope of Work

The objective of this investigation is to perform delineation sampling of the exceedances identified from the site investigation grid sampling on the balance of the Site. The findings will provide the extents of the hotspots to be excavated and disposed of as part of the remedial action for this Site in addition to the requirements set forth by the NJDEP BSWC&E.

This workplan may be revised in the field in the event that potential areas of environmental concern (i.e., staining, discolored soil or other indicators of potential contamination) are identified during the implementation of field activities.

All work will be conducted in general accordance with the NJDEP Technical Requirements for Site Remediation (TRSR) N.J.A.C. 7:26E, NJDEP Field Sampling Procedures Manual (FSPM) and applicable NJDEP Guidance documents.

2.2 Sample Collection

Prior to conducting the subsurface investigation, the drilling contractor will be responsible for obtaining proper utility mark-outs and required work permits, and active utility clearance prior to drilling. Soil borings will be advanced using Geoprobe® “direct push” technology or via hand tools. Soil samples will be collected via five-foot dedicated acetate sampling cores or via hand tools. All soil samples will be classified based on their color, structure, and particle size, field-screened using a photo-ionization detector (PID), and calibrated using isobutylene span gas with a concentration of 100 parts per million (ppm). Coordinates of each soil boring will be collected by Matrix via a handheld global positioning system (GPS) unit. Matrix will coordinate with the Village to allow access to the soil boring locations.

All soil sample analyses will be conducted by SGS Laboratories (NJDEP No. 12129) of Dayton, New Jersey under chain-of-custody documentation. The analytical data package for all samples will be a NJDEP Reduced Deliverables Package in Data Known Quality Protocol format. Figure 1 depicts the soil boring locations for a total of 89 proposed soil borings within the Site. The locations of the soil borings may be revised while in the field.

2.2.1 Soil Sampling and Analysis – Delineation Borings

The advancement of up to 81 soil borings are proposed throughout the Site for delineation of the sample locations identified with exceedances in accordance with N.J.A.C. 7:26E(4.2). Two rings of horizontal delineation borings will be equally spaced to approximately 7.5 feet in the north, south, east, and west direction; therefore, creating the first ring with a 7.5 foot radius and the second ring with a 15 foot radius from the original sampling location. If fill material where solid waste is visually observed is encountered after measuring 7.5 feet, continue moving outwards until solid waste is not observed. A sample will not be collected within fill material from the first ring where solid waste is visually observed. The objective of moving the first ring beyond 7.5 feet is the ensure the first ring does not encompass solid waste and samples are collected from non-solid waste material, thus properly delineating the extent of solid waste material. The vertical delineation will consist of two sampling intervals: one 6 inches deeper and one 1 foot deeper from the original sampling location. Each delineation boring will be collected and analyzed for the compound of concern that was detected exceeding the NJDEP's SRS. For any delineation sample that displays a visually inconsistent appearance to the fill material that has already been characterized (i.e., a different kind of fill material is identified), the analysis of that sample location will be expanded to analyze the Target Compound List/Target Analyte List (TCL/TAL) plus a forward library search (+30) suite. A table with COCs associated with each original sampling location is included below as Table 1 and a table with the accompanying analysis per delineation sample is attached as Table 2.

Table 1: Soil Sample Contaminants of Concern per Location

Original Sample Location	Analytical Parameters
GRID-4	Benzo(a)pyrene
GRID-10A	Mercury & Benzo(a)pyrene
GRID-11	Benzo(a)pyrene
GRID-16	Benzo(a)pyrene
GRID-18	Benzo(a)pyrene & Benzo(a)anthracene
GRID-20	Benzo(a)pyrene & Benzo(a)anthracene
GRID-21	Benzo(a)pyrene
GRID-26	Benzo(a)pyrene
GRID-28	Benzo(a)pyrene

Note: All locations subject to a TCL/TAL+30 analysis

The advancement of up to 8 borings are proposed to further characterize the grids that were identified with impacted material. The characterization borings will be advanced to a depth within the limits of the imported soils (approximately five feet bgs). If another area within the impacted grid is observed with fill material, the sample location will be biased towards the observed fill. One soil sample from each boring

will be collected and submitted for TCL/TAL plus 30 tentatively identified compounds analyses. A total of eight soil samples, as detailed in Table 3, will be collected from the borings biased towards the discrete 6-inch interval with the greatest potential for contamination based on field observations (i.e., elevated PID readings, staining, odor, evidence of fill materials, etc.). If no PID readings or evidence of VOC impacts are present, VOC analysis does not have to be completed from that sample location. To ensure accurate PID readings, one VOC analysis will be analyzed from one of the sample locations that have been analyzed for TCL/TAL+30 exhibiting the greatest likelihood of contamination. If no evidence of contamination is identified, soil samples will be collected from varying six-inch intervals to ensure imported fill limits are fully represented. A table with sample details is included in below in Table 3.

Table 3: Soil Sample Summary Table – Additional Grid Characterization

Sample ID	Depth	Analytical Parameters
GRID-29	6-inch interval with the greatest potential for contamination	TCL/TAL+30
GRID-30	6-inch interval with the greatest potential for contamination	TCL/TAL+30
GRID-31	6-inch interval with the greatest potential for contamination	TCL/TAL+30
GRID-32	6-inch interval with the greatest potential for contamination	TCL/TAL+30
GRID-33	6-inch interval with the greatest potential for contamination	TCL/TAL+30
GRID-34	6-inch interval with the greatest potential for contamination	TCL/TAL+30
GRID-35	6-inch interval with the greatest potential for contamination	TCL/TAL+30
GRID-36	6-inch interval with the greatest potential for contamination	TCL/TAL+30

NOTES:
TCL/TAL+30 = Target Compound List/Target Analyte List plus tentatively identified compounds

2.2.3 Waste Handling

Upon completion of each soil boring, drill cuttings will be placed back into the bore hole to the surface and the surface restored to match the surrounding ground material.

2.4 Reporting

Upon the completion of all soil investigation field activities and receipt of all analytical data, a Remedial Investigation Report (RIR) will be prepared and will include:

- Sample location plan
- Summary of sampling events activities
- Summary of laboratory reported analytical results compared to applicable criteria and standards.

- Soil boring logs
- Laboratory analytical package
- Discussion of any remedial needs

The laboratory reported soil sample analytical results will be compared to NJDEP's Soil Remediation Standards, promulgated at N.J.A.C. 7:26D.

Re: Conditional Approval for Solid Waste Sampling (page 1 of 4)
Matrix New World Sampling Plan of November, 2024
Schedler Property at 460 West Saddle River Road, Ridgewood Village
Solid Waste Program Interest # U4347

Dear Ms. Feury and Mr. Kazmark,

The New Jersey Department of Environmental Protection's Bureau of Solid Waste Compliance and Enforcement (BSWC&E) has completed our review of the referenced document and approves same under the conditions noted herein.

1.) As further delineation sampling of the contaminants found at concentrations that trigger the definition of solid waste within the soil berm is not proposed, the BSWC&E is presuming that the soil berm will be addressed in a Corrective Action Workplan (CAW). Accordingly, any comments noted herein are limited to the portions of the site not encompassed by the soil berm.

2.) This conditions of this approval which address sampling and analyses protocol are limited to the determination of whether the soil/fill materials being sampled meet the portion of the definition of solid waste that addresses contaminant concentrations as referred to in N.J.A.C. 7:26-1.6(a)6. As such, analytical results from **any one** sample that indicate concentrations of contaminants that are above the Residential Ingestion-Dermal or Residential Inhalation soil remediation standards at N.J.A.C. 7:26 D are indicative of solid waste. While delineation of such contamination is acceptable with a plan approved by BSWC&E, **no compliance averaging** is accepted for the purpose of making a solid waste determination.

3.) The BSWC&E does not make determinations regarding whether or not soils or materials can be considered as Clean Fill pursuant to N.J.A.C. 7:26E -1.8. As such, upon receipt of acceptable data that indicates contaminant concentrations that do not trigger the definition of solid waste at N.J.A.C. 7:29-1.6(a)6, the

BSWC&E will acknowledge same by noting field compliance has been achieved (any penalty settlement aside) with respect to the particular solid waste violation associated with the quality of the soil/fill materials. The BSWC&E does not make determinations regarding whether or not a site has been remediated.

4.) The BSWC&E understands the strategy presented in the subject plan is to first visually determine if subsurface solid waste is present within an inner ring of borings surrounding the borings that previously were found to trigger the definition of solid waste. If solid waste is visually observed within the inner ring of borings will then move outwards to attempt to find subsurface conditions without a visual indication of solid waste within the subsurface to establish the locations of outer borings which will be used to collect samples to chemically determine if the materials sampled trigger the definition of solid waste. If such samples do not trigger the definition of solid waste, the BSWC&E would agree that subsurface delineation of solid waste has been appropriately addressed for the purpose of developing a CAW for the BSWC&E's review and approval prior to implementation. Any visual solid waste, whether that be in the subsurface or the surface of the site, shall be addressed in the CAW along with areas that chemically trigger the definition of solid waste.

5.) Unless rectification of the Quality Control issue associated with the Matrix Spike pesticides analysis can be resolved to the satisfaction of the BSWC&E, that is, the reported low recoveries for Alpha-BHC, Delta-BHC, Lindane, 4,4-DDD, 4,4-DDT, and Endrin Aldehyde during the previous grid sampling event, an additional Matrix Spike sample shall be collected and analyzed for Target Compound List pesticides within an area representative of the imported fill at this site. If this analysis proves to show acceptable spike recovery ranges, the BSWC&E will consider this data anomaly to have been appropriately addressed. If, however, insufficient matrix spike recovery is demonstrated, additional sampling and analyses for Target Compound List pesticides shall occur in at least the following areas with the understanding that further delineation sampling and analyses for such pesticides will be required if the samples noted below generate data that triggers the definition of solid waste:

- within the imported fill at all original grid sample locations for which further sampling has not been proposed by Matrix; and,
- within the locations and depths for the vertical delineation samples proposed by Matrix.

In order to reduce the mobilizations to the site for additional delineation sampling to address potential pesticide contamination, Ridgewood Village may want to consider collecting contingency samples based upon the results of the samples required to be analyzed as noted above.

6.) Unless otherwise specified herein, all sampling shall be performed in accordance with the latest version of the NJDEP's Field Sampling Procedures Manual and N.J.A.C. 7:26 E – The Technical Requirements for Site Remediation.

7.) All analyses shall be performed by a laboratory that has at least the following two certifications:

a.) Overall Laboratory Certification from the State of New Jersey; and,
b.) Certification from the State of New Jersey for the particular test method being employed.

8). Any proposed analytes shall incorporate the test methods associated with EPA's Contract Laboratory Program (CLP) and shall be those analytes included in the respective Target Analyte List (TAL) or Target Compound List (TCL) of the CLP. For example, any proposal to analyze for "Metals" shall be inclusive of all metals in the TAL. For solid waste determinations, the BSWC&E will not be reviewing the Tentatively Identified Compounds (TIC) data as such data is not tied to the definition of solid waste. Hexavalent chromium analysis may be substituted for total chromium analysis, however, since there is no promulgated Residential Soil Remediation Standard within N.J.A.C. 7:26D for either total or hexavalent chromium and therefore chromium analyses does not address the definition of solid waste, the BSWC&E will not be commenting on the results of such analyses. Rather, interpretation of both chromium analyses and TICs would fall within the purview of the Licensed Site Remediation Professional (LSRP) retained pursuant to N.J.A.C. 7:26C.

9.) The Quality Assurance Plans shall incorporate quality control provisions while providing at least the Reduced Regulatory Deliverables pursuant to Attachment A-II of N.J.A.C. 7:26 E. The locations of the Laboratory Non-Conformance Summary (NCS), Sample Receipt Form and Chain of Custody shall be readily identified in the laboratory report. Please take particular note of the need to document a conclusion of the review of the NCS for which a certification is required as noted on the attached Data Documentation Review form.

10.) To expedite the BSWC&E's data review, in addition to the full scale laboratory report, a separate table shall be submitted which compares the data to the Residential Ingestion-Dermal and Residential Inhalation soil remediation standards at N.J.A.C. 7:26D. Any comparison to either default or site specific Migration to Ground Water pathway soil remediation standards would not be performed by the BSWC&E, but rather by the LSRP retained pursuant to N.J.A.C. 7:26C. Further, if the site is located within or the contaminants from the fill could migrate to an Environmentally Sensitive Natural Resource, the LSRP would compare the analytical results to the Ecological Screening Criteria instead of the BSWC&E as such criteria is not tied to the definition of solid waste.

11.) Within ninety (90) days upon receipt of this conditional approval, a Report of Findings shall be submitted which includes at a minimum:

a.) text describing the activities conducted, sampling techniques employed and observations made;
b.) a scaled Site Map noting all sample locations and plotting the analytical results that trigger the definition of solid waste at such locations;

c.) boring logs depicting subsurface material descriptions, soil gas readings and the depth of sample collection;
d.) tabulated laboratory data comparing the analytical results to the Residential Soil Remediation Standards;
e.) a laboratory report replete with Tier 2 Reduced Laboratory Data Deliverables consistent with Appendix A of N.J.A.C. 7:26E;
f.) a letter of interpretation of the laboratory's Non-Conformance Summary providing an opinion on the reliability of the data generated;
g.) a completed Data Review Documentation form;
h.) calibration log for the soil gas direct reading instrument; and,
i.) a proposed schedule to submit a CAW.

12.) The BSWC&E intends on observing the field work. If there are any changes to the planned implementation of this sampling event which is understood to take place on November 21 and 22nd of this year, please notify the undersigned upon determination of same.

13.) This conditional approval does not and should not limit the scope of work that a LSRP retained to remediate the subject site pursuant to N.J.A.C. 7:26C may advise their client to be performed in support of a Response Action Outcome.

14.) Ridgewood Village and/or their representatives shall apply for and obtain any requisite federal, State or local permits or approvals that may be necessary prior to performing the work associated with this conditional approval.

Should you have any questions, please contact me at (609) 633-1237.

Regards,

Tom Farrell, Chief

Bureau of Solid Waste Compliance & Enforcement

C: Gina Lugo, David Ongaro – BSWC&E

APPENDIX F

Nankoweep Data Validation Reports

RIDGEWOOD BERM SAMPLING
VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JE1296 DATED DECEMBER 5, 2024
LABORATORY REPORTS # JE1296R and JE1296U DATED DECEMBER 12, 2024

INTRODUCTION

Matrix New World Engineering (Matrix) collected 36 soil samples, two field duplicate samples, and one aqueous field blank on November 21, 2024. Samples were relinquished to an SGS Laboratory courier, and then transported to SGS Laboratory, located in Dayton, New Jersey. Samples were received at SGS on November 21, 2024 at an acceptable temperature of 4.1 degrees Celsius. Sample identifications and requested analyses are listed below. Several samples were placed on hold, pending the results of the initial analyses. If the hold analyses were performed, these are noted in the following pages in **BOLD** in the comments column, and are validated as applicable.

Matrix Sample ID	Lab Sample ID	Analyses Requested and Methods		Initial Status / Comment

5. LCS Duplicate %R and (RPD)		X		X	Aqueous only
6. Matrix Spike (MS) %R		X		X	
7. MS Duplicate (MSD) %R and (RPD)		X		X	
8. Surrogate Recoveries (%R)		X	X		No, see notes
9. Field Duplicate Comparison		X		X	
10. Results Quantitation		X		X	

%R - percent recovery RPD - relative percent difference CCV – continuing calibration verification

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) Samples were collected on November 21, 2024. The initial soil samples (and aqueous field blank) were extracted on November 27, 2024 within the required 14-day holding time. SVOC analyses were performed by November 29, 2024 within the 40 day holding time after extraction. Sample GRID-28(2.5-3) was initially placed on hold, then identified for analysis. This sample was extracted on December 2, 2024 and analyzed on December 20, 2024. Extraction and analysis holding times were met.

2) No sample dilutions were required for analysis of Benzo(a)anthracene or Benzo(a)pyrene. No SVOCs were detected in soil samples at concentrations between the method detection limit (MDL) and the reporting limit (RL). Reporting limits are determined to be acceptable.

3) SGS provided results from one solid matrix method blank in support of the Benzo(a)anthracene or Benzo(a)pyrene analyses. No SVOCs were detected in the method blank. Results from an aqueous method blank were also provided with no SVOCs detected

Results from one aqueous field blank were provided. No Benzo(a)anthracene or Benzo(a)pyrene were detected in the field blank.

4-5) SGS provided results from one set of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the Benzo(a)anthracene and Benzo(a)pyrene analyses. LCS recoveries were within laboratory specified control limits, ranging from 61 to 66 percent. Accuracy, as demonstrated by these analyses is acceptable.

One set of aqueous LCS and LCS duplicate analyses were provided in support of the field blank. Precision and accuracy, as demonstrated by these analyses is acceptable.

6-7) SGS provided results from one set of project specific (spike on sample GRID-26(2.0-2.5) matrix spike (MS) and MSD duplicate analyses in support of the Benzo(a)anthracene and Benzo(a)pyrene analyses. MS and MSD recoveries ranged from 63 to 79 percent (control limits of 10 to 163 percent) with a maximum RPD between MS and MSD results of 17 percent. Precision and accuracy, as demonstrated by these analyses is acceptable.
.

8) Three surrogates were spiked into each soil sample in support of the Benzo(a)anthracene and Benzo(a)pyrene analyses. Surrogate recoveries ranged from 5 to 150 percent. Some surrogate recoveries were out of control, as follows:

Sample ID	Surrogate Recovery	Control	Action
GRID-28 E1	2-Fluorobiphenyl = 118%	109 %	None
	Terphenyl-d14 = 150%	120 %	None
GRID-16-N1	Nitrobenzene-d5 = 9%	10 %	None
GRID-16-W1	Nitrobenzene-d5 = 5%	10 %	None

For sample GRID-28 E1, there is no action, as the surrogate recoveries are high, and the associated target compounds were not detected in the sample. No bias to the sample results is indicated. For the low Nitrobenzene surrogate recoveries associated with samples from Grid-16, no action is taken, as this surrogate is not associated with the analysis of the two polyaromatic hydrocarbon target compounds.

9) Two sets of field duplicate samples were submitted in support of the SVOC analyses.

Sample DUP-1 was submitted as a blind field duplicate of primary sample GRID-28-E1
Sample DUP-2 was submitted as a blind field duplicate of primary sample GRID-16-E1.

Benzo(a)pyrene was not detected in either the primary or duplicate samples. Therefore, field duplicate precision is determined to be acceptable

10) Sample results were reported on a dry weight basis. No anomalies were noted with respect to results quantitation or reporting for the two target SVOC compounds.

%R - percent recovery RPD - relative percent difference CCV – continuing calibration verification

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) The soil samples for analysis of pesticides were extracted by December 3, 2024 within the required 14-day holding time. Pesticide analyses were performed by December 9, 2024 within the 40-day holding time after extraction.

2) No samples were analyzed at dilutions to quantify specific pesticides. Several pesticides were detected in soil samples at concentrations between the method detection limit (MDL) and the reporting limit. **Due to limited accuracy in this portion of the calibration range these pesticide results are qualified as J/Estimated, as follows:**

Sample ID	**Qualified Pesticides (ug/kg)**
GRID-26R	alpha-Chlordane = 0.12 *J*
GRID-26R	Chlordane = 0.12 *J*
GRID-26R	4,4'-DDD = 0.087 *J*
GRID-28R	Endosulfan-II = 0.23 *J*

3) SGS provided results from two full suite solid matrix method blanks in support of the pesticide analyses.

One aqueous field blank was analyzed with the initial report of soil samples. No pesticides were detected in the field blank.

4-5) SGS provided results from two full sets of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the pesticide analyses. All LCS recoveries were within laboratory specified control limits, ranging from 78 to 104 percent. Accuracy, as demonstrated by these analyses is acceptable. Some spike recoveries were reported from the 1st analytical signal, as precision for the secondary signal was poor.

LCS and LCS duplicate results were provided in support of the aqueous analyses (field blank) with acceptable precision and accuracy.

6-7) SGS provided results from two sets of batch specific matrix spike (MS) and MS duplicate analyses in support of the pesticide analyses. One batch spike was associated with sample GRID-26R only. The sample spike has elevated pesticide detections exceeding calibration ranges. MS and MSD recoveries for this spike ranged from 81 to 401 percent, with numerous high recoveries. This spike is not considered to be representative. The other batch spike had MS and MSD recoveries ranging from 65 to 114 percent. Precision and accuracy, as demonstrated by this spike, are acceptable. This spike is considered to be more representative of the project soil samples analyzed.

8) Two surrogates (tetrachloro-m-xylene and decachlorobiphenyl) were spiked into each soil sample in support of the solid matrix pesticide analyses. Surrogates were reported from each of the two columns used in the analyses. Surrogate recoveries ranged from 28 to 109 percent and were low for two samples as listed below:

Sample ID	Low DCBP % Rec
GRID-16R	Decachlorobiphenyl = 28 %
GRID-18R	Decachlorobiphenyl = 28 %

Recoveries for the decachlorobiphenyl surrogate were low by 1 percent from the first analytical signal for the two samples listed above. The surrogate recoveries from the second signal were acceptable. No pesticides were detected from either signal for the two samples listed above. Therefore no action is taken for the slightly low DCBP surrogate recoveries.

9) Several sets of DDT/Endrin breakdown check standards were analyzed coinciding with each analytical batch. DDT and Endrin breakdown levels were all less than the QAPP specific level of 15 percent.

10) Two sets of field duplicate samples were submitted in the initial sample submittal. These samples were not selected for field duplicate analysis of pesticides.

11) Sample results were reported on a dry weight basis. No anomalies were noted with respect to results pesticide quantitation or reporting, with the following exceptions. Some pesticides were flagged by SGS due to an RPD of more than 40% between the dual GC columns used for quantitation and confirmation. In many cases, the pesticides in question were also qualified as J/Estimated due to reporting limits. The following samples results and are qualified due to poor precision between pesticide detections on the dual columns.

Sample ID	Qualified pesticides (ug/Kg)
GRID-26R	alpha-Chlordane = 0.12 *J*
GRID-28R	alpha-Chlordane = 10.4 *J*
GRID-28R	Dieldrin = 1.3 *J*
GRID-28R	Endosulfan-II = 0.23 *J*
GRID-28R	Heptachlor epoxide = 1.8 *J*

RIDGEWOOD BERM SAMPLING
VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JE1296 DATED DECEMBER 5, 2024

LABORATORY REPORTS # JE1296R and JE1296U DATED DECEMBER 12, 2024

Matrix New World Engineering (Matrix) collected 36 soil samples, two field duplicate samples, and one aqueous field blank on November 21, 2024. The sample results have been validated in accordance with the Project QAPP requirements, guidance from the National Functional Guidelines for Organic data Review, and professional judgment of the data reviewer.

The QC information evaluated has been described in the preceding pages. Based on this review, data provided for the soil samples collected are determined to be quantitative, with the exceptions noted in the following table.

Sample Identification(s) / Analyte(s)	Data Qualifier(s)	Reason(s) For Qualification
Pesticides GRID-26R / alpha-Chlordane, Chlordane, 4,4'-DDD GRID-28R / Endosulfan-II	J/Estimated	These pesticides were reported at concentrations between the method detection limit and the reporting limit. Accuracy in this portion of the calibration curve may be limited.
Pesticides GRID-26R / alpha-Chlordane GRID-28R / alpha-Chlordane, Dieldrin, Endosulfan-II, and Heptachlor epoxide	J/Estimated	More than 40% difference between the dual GC columns used for quantitation and confirmation.

VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JE1300 DATED JANUARY 9, 2025

LABORATORY REPORTS # JE1300R DECEMBER 9, 2024

INTRODUCTION

Matrix New World Engineering (Matrix) collected 48 soil samples, two field duplicate samples, and one aqueous field blank on November 22, 2024. Samples were relinquished to an SGS Laboratory courier, and then transported to SGS Laboratory, located in Dayton, New Jersey. Samples were received at SGS on November 22, 2024 at an acceptable temperature of 1.7 degrees Celsius. Sample identifications and requested analyses are listed below. Several samples were placed on hold, pending the results of the initial analyses. If the hold analyses were performed, these analyses are noted in **bold** in the following table, discussed in the following pages, and are validated as applicable.

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) Samples were collected on November 22, 2024. The initial soil samples were extracted on December 4, 2024. The aqueous field blank was extracted on November 27, 2024. All samples were extracted within the required 14-day holding time. SVOC analyses were performed by December 10, 2024 within the 40 day holding time after extraction. The following samples were initially placed on hold or were designated for additional analyses. These were then identified for analysis and were reported in Pace report JE1300R.

   GRID-11(2.5-3) GRID-11-N2 GRID-11-S2 GRID-10A-N2 GRID-21-N2.

   Extraction and analysis holding times were met.

2) No sample dilutions were required for analysis of Benzo(a)anthracene or Benzo(a)pyrene. Benzo(a)pyrene was detected in one soil sample at a concentration between the method detection limit (MDL) and the reporting limit (RL). **Due to limited accuracy in this portion of the calibration range, this sample result is qualified as follows:**

Sample ID	Qualified Result (ug/Kg)
GRID-4-N1	Benzo(a)pyrene = 32.9 *J*

All other reporting limits are determined to be acceptable.

3) SGS provided results from three solid matrix method blanks in support of the Benzo(a)anthracene or Benzo(a)pyrene analyses. No SVOCs were detected in the method blanks. Results from an aqueous method blank were also provided, with no SVOCs detected

Results from one aqueous field blank were provided. No Benzo(a)anthracene or Benzo(a)pyrene were detected in the field blank.

4-5) SGS provided results from three sets of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the Benzo(a)anthracene and Benzo(a)pyrene analyses. LCS recoveries were within laboratory specified control limits, ranging from 61 to 80 percent. Accuracy, as demonstrated by these analyses is acceptable.

One set of aqueous LCS and LCS duplicate analyses were provided in support of the field blank. Precision and accuracy, as demonstrated by these analyses is acceptable.

6-7) SGS provided results from three sets of project specific (spike on samples GRID-11(2.5-3.0), GRID-18-N1, and GRID-21(2.0-2.5) matrix spike (MS) and MSD duplicate analyses in support of the Benzo(a)anthracene and/or Benzo(a)pyrene analyses. MS and MSD recoveries ranged from 54 to 76 percent (control limits of 10 to 163 percent) with a maximum RPD between MS and MSD results of 21 percent. Precision and accuracy, as demonstrated by these analyses is acceptable.
.

8) Three surrogates were spiked into each soil sample in support of the analyses Benzo(a)anthracene and Benzo(a)pyrene. Surrogate recoveries ranged from 30 to 83 percent. And were within prescribed control limits

9) Two sets of field duplicate samples were submitted in support of the SVOC analyses.

Sample DUP-3 was submitted as a blind field duplicate of primary sample GRID-4-E1
Sample DUP-5 was submitted as a blind field duplicate of primary sample GRID-10A-S1.
Results of the field duplicate sampling are presented below for any benzo(a)anthracene or benzo(a)pyrene detected. All results are in presented in units of ug/Kg.

Sample ID	Benzo(a)pyrene
DUP-003	83.4
GRID-4-E1	39.2
RPD (%)	**72**

Sample ID	Benzo(a)pyrene
DUP-005	148
GRID-10A-S1	99.5
RPD (%)	39

Soil sample field duplicate precision is evaluated based on an acceptable RPD of 50 percent or less. Based on this criteria, field duplicate precision is poor for Benzo(a)pyrene in the DUP-003/GRID-4-E1 pair. These benzo(a)pyrene results are qualified as J/Estimated.

10) All results were reported on a dry weight basis. No anomalies were noted with respect to results quantitation or reporting for the two target SVOC compounds.

%R - percent recovery RPD - relative percent difference CCV – continuing calibration verification

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) Samples were collected on November 22, 2024. The soil samples for analysis of pesticides were extracted by December 2, 2024 within the required 14-day holding time, with one exception. Sample GRID-4R was extracted on December 9, 2024, past the 14 day holding, for a dilution analysis**. Due to the missed exaction time, results for the diluted pesticides are qualified as**

J/Estimated (see below). Pesticide analyses were performed by December 26, 2024 within the 40-day holding time after extraction.

2) Sample GRID-4R was diluted by a factor of 5 times (**past extraction hold time**) to quantify alpha-chlordane, chlordane, and heptachlor epoxide**. Result for these pesticides are qualified.**

No other samples were analyzed at dilutions to quantify specific pesticides. Several pesticides were detected in soil samples at concentrations between the method detection limit (MDL) and the reporting limit. **Due to limited accuracy in this portion of the calibration range these pesticide results are qualified as J/Estimated, as follows:**

Sample ID	**Qualified Pesticides (ug/kg)**
GRID-4R	Heptachlor = 0.12 *J*
GRID-4(2.0-2.5)	4,4'-DDD = 0.15 *J*
GRID-4(2.0-2.5)	Methoxychlor = 0.033 *J*
GRID-11R	Heptachlor epoxide = 0.14 *J*
GRID-10R	Dieldrin = 0.26 *J*
GRID-10R	Heptachlor epoxide = 0.22 *J*
GRID-21R	Endosulfan-II = 0.23 *J*
GRID-21R	Methoxychlor = 0.26 *J*

3) SGS provided results from two full suite solid matrix method blanks in support of the pesticide analyses.

One aqueous field blank was analyzed with the initial report of soil samples. No pesticides were detected in the field blank.

4-5) SGS provided results from one full set of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the pesticide analyses. All LCS recoveries were within laboratory specified control limits, ranging from 78 to 104 percent. Accuracy, as demonstrated by these analyses is acceptable.

LCS and LCS duplicate results were provided in support of the aqueous analyses (field blank) with acceptable precision and accuracy.

6-7) SGS provided results from two sets of project specific matrix spike (MS) and MS duplicate analyses in support of the pesticide analyses (spikes on project samples GRID-4R and GRID-11R).

The spike of sample GRID-4R was performed on the undiluted sample. Form 1 quantitation of sample GRID-4R used diluted results for some pesticides. MS and MSD recoveries ranged from 83 to 401 percent. The maximum RPD between MS and MSD results was acceptable at 20 percent. **MS or MSD recoveries for non-diluted pesticides were high for gamma chlordane, 4,4-DDE, 4,4-DDT, and Endosulfan I**. For 4,4-DDE, the native sample concentration was more than 4 times higher than the spike added amount, and the spike recovery is not considered as representative. **For the remaining pesticides listed in bold, results may be biased, and are qualified as J/Estimated for sample GRID-4R.**

For the spike of sample GRID-11R, MS and MSD recoveries ranged from 52 to 822 percent. MS and/or MSD recoveries were high for alpha-Chlordane, gamma-Chlordane, Chlordane, 4,4-DDD, 4,4-DDT, 44-DDD, endosulfan I, and heptachlor epoxide. The maximum RPD between MS and MSD results was acceptable at 20 percent. **Pesticides with the high MS/MSD recoveries are qualified as J/Estimated for sample GRID-11R due to potential bias.**

8) Two surrogates (tetrachloro-m-xylene and decachlorobiphenyl) were spiked into each soil sample in support of the solid matrix pesticide analyses. Surrogates were reported from each of the two columns used in the analyses. Surrogate recoveries ranged from 31 to 237 percent and were with laboratory prescribed control limits. Surrogate recoveries were high associated with the three pesticides in sample GRID-4R that were analyzed at dilutions. No action is taken for the high surrogate recoveries reported from the dilution analyses, as these surrogates may be impacted by the dilutions.

9) Several sets of DDT/Endrin breakdown check standards were analyzed coinciding with each analytical batch. DDT and Endrin breakdown levels were all less than the QAPP specific level of 15 percent.

10) Two sets of field duplicate samples were submitted in the initial sample submittal. These samples were not selected for field duplicate analysis of pesticides.

11) All results were reported on a dry weight basis. No anomalies were noted with respect to results pesticide quantitation or reporting, with the following exceptions. Some pesticides were flagged by SGS due to an RPD of more than 40% between the dual GC columns used for quantitation and confirmation. In many cases, the pesticides in question were also qualified as J/Estimated due to reporting limits. The following samples results and are qualified due to poor precision between pesticide detections on the dual columns.

Sample ID	Qualified pesticides (ug/Kg)
GRID-11R	4,4-DDT = 0.44 *J*
GRID-11R	Endosulfan-II = 0.42 *J*
GRID-11R	Heptachlor epoxide = 0.14 *J*
GRID-11R	Methoxychlor = 1.1 *J*
GRID-10R	Heptachlor epoxide = 0.22 *J*
GRID-21R	Dieldrin = 0.61
GRID-21R	4,4-DDD = 0.70 *J*
GRID-21R	Endrin = 0.63 *J*
GRID-21R	Endosulfan-II = 0.23 *J*
GRID-21R	Heptachlor epoxide = 0.49 *J*
GRID-21R	Methoxychlor = 0.26 *J*

COMMENTS: Performance was acceptable, with the following exceptions and/or notes:

1) Samples were collected on November 22, 2024. The soil samples for analysis of mercury were analyzed within the 28-day holding time by December 6, 2024. Extraction and analysis holding times were met.

2) Mercury was reported from a two times dilution for sample GRID-10A-S2. No other mercury analyses were performed at dilutions. All mercury results were reported to RL. No mercury detections were reported at concentrations between the MDL and RL. Reporting limits are determined to be acceptable.

3) Results from numerous sets of initial and continuing calibration blanks were provided in support of the mercury analyses. Results for these blanks were presented in aqueous units. No mercury was detected at concentrations exceeding the RL. Results from one set of solid matrix method blanks were also provided, with no metals detected at concentrations exceeding the RL.

Result from an aqueous field blank were provided, with no mercury detected.

4) Results from several sets of initial and continuing calibration analyses were provided for the mercury metals. All ICV and CCV standard recoveries were within control limits of 90-110 percent. Low level ICVs results were provide with acceptable recoveries between 70-130 percent.

5) ICP interference check samples are not applicable to mercury.

6-7) SGS provided results from one set of solid matrix batch specific matrix spike (MS) and MSD duplicate analyses in support of the mercury analyses. MS and MSD recoveries ranged from 116.1 to 116.7 percent, with an RPD of 0 percent between spike results. Precision and accuracy, as demonstrated by these analyses is acceptable. Another project spike was performed on sample GRID-21R with recoveries of 82.3 to 120.3 percent. The upper control limit of 120 is slightly exceeded in the project spike. No action is taken for the small spike exceedance.

8) SGS provided results from one set of solid matrix LCS analyses in support of the mercury soil samples. The LCS recovery was acceptable at 99 percent (control limits of 80-120 percent).

9) Serial dilution analysis in not applicable to mercury.

10) Sample DUP-5 was submitted as a blind field duplicate of primary sample GRID-4-E1

Results of the field duplicate sampling are presented below. All results are in presented in units of ug/Kg.

Sample ID	Mercury
DUP-005	240
GRID-10A-S1	310
RPD (%)	25.5

Field duplicate precision is determined to be acceptable, within an RPD of 25,5 percent between mercury detections.

11) No anomalies were noted with respect to the mercury reporting. All results were reported on a dry weight basis.

RIDGEWOOD BERM SAMPLING
VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JE1300 DATED JANUARY 9, 2025

LABORATORY REPORTS # JE1300R DECEMBER 9, 2024

Matrix New World Engineering (Matrix) collected 48 soil samples, two field duplicate samples, and one aqueous field blank on November 22, 2024. The sample results have been validated in accordance with the Project QAPP requirements, guidance from the National Functional Guidelines for Organic and Inorganic data Review, and professional judgment of the data reviewer.

The QC information evaluated has been described in the preceding pages. Based on this review, data provided for the soil samples collected are determined to be quantitative, with the exceptions noted in the following table.

Sample Identification(s) / Analyte(s)	Data Qualifier(s)	Reason(s) For Qualification
SVOCs GRID-4-N1 / Benzo(a)pyrene	J/Estimated	Benzo(a)pyrene was reported at a concentration between the method detection limit and the reporting limit. Accuracy in this portion of the calibration curve may be limited.
SVOCs DUP-003 and GRID-4-E1 / Benzo(a)pyrene	J/Estimated	Poor field duplicate precision. RPD exceeds 50%.
Pesticides GRID-4R / alpha-chlordane, chlordane, and heptachlor epoxide	J/Estimated	These pesticides were extracted past allowable holding times. Sample results may be biased and are qualified as J/Estimated.
Pesticides GRID-4R /Heptachlor GRID-4(2.0-2.5) 4,4'-DDD and Methoxychlor GRID-11R / Heptachlor epoxide GRID-10R / Dieldrin and Heptachlor epoxide GRID-21R / Endosulfan and Methoxychlor	J/Estimated	These pesticides were reported at concentrations between the method detection limit and the reporting limit. Accuracy in this portion of the calibration curve may be limited.

Sample Identification(s) / Analyte(s)	Data Qualifier(s)	Reason(s) For Qualification
Pesticides GRID-11R / 4,4-DDT,Endosulfan-II, Heptachlor epoxide , Methoxychlor GRID-10R / Heptachlor epoxide GRID-21R / Dieldrin, 4,4-DDD, Endrin, Endosulfan-II, Heptachlor epoxide, Methoxychlor	J/Estimated	More than 40% difference between the dual GC columns used for quantitation and confirmation.
Pesticides GRID-4R/ gamma chlordane, 4,4-DDT, and Endosulfan I GRID-11R/ alpha-Chlordane, gamma-Chlordane, Chlordane, 4,4-DDD, 4,4-DDT, 44-DDD, endosulfan I, and heptachlor epoxide	J/Estimated	MS and MSD recoveries for these pesticides are high in the project specific spikes. Many factors may contribute to the high spike recoveries, including the presence of high concentration pesticides in the samples spiked. The direction of bias to the pesticides listed is not certain.

RIDGEWOOD BERM SAMPLING
VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JE1534 DATED DECEMBER 19, 2024

INTRODUCTION

Matrix New World Engineering (Matrix) collected eight soil samples on November 26, 2024. Samples were relinquished to an SGS Laboratory courier, and then transported to SGS Laboratory, located in Dayton, New Jersey. Samples were received at SGS on November 26, 2024 at an acceptable temperature of 2.9 degrees Celsius. Sample identifications and requested analyses are listed below.

Matrix Sample IDs	Laboratory Sample IDs	Analyses Requested and Methods
GRID-1	JE1534 -1	TCL VOCs – EPA Method 8260D
GRID-2	JE1534 -2	
GRID-5	JE1534 -3	
GRID-6	JE1534 -4	
GRID-17	JE1534 -5	
GRID-19	JE1534 -6	
GRID-25	JE1534 -7	
FB-3	JE1534-8	TCL VOCs – EPA Method 8260D TCL SVOCs – EPA Method 8270E TCL Pesticides – EPA Method 8081B PCBs (Aroclors) – EPA Method 8082A TAL Metals – EPA Method 6010D and 7471B (Mercury) Cyanide - EPA Method 9012B

TAL = Target Analyte List
SVOC = Semi-Volatile Organic Compounds
PCBs = Polychlorinated Biphenyls
TCL = Target Compound List
VOCs = Volatile Organic Compounds

Quality Control for the soil samples is evaluated in the following checklist tables and comments. A summary of data quality for the samples analyzed is provided at the end of this validation report.

CCV – continuing calibration verification

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) Samples were collected on November 26, 2024. The soil samples were extracted on November 27, 2024 and were analyzed on December 2, 2024, within the required 14-day holding time. Analysis holding times were met.

2) No sample dilutions were required for analysis of VOCs. No VOCs were detected in any of the soil samples.

3) SGS provided results from two full suite solid matrix method blanks in support of the VOC analyses. No VOCs were detected in the method blanks. Results from one aqueous method blank were also provided with no VOCs detected. Results from one field bank were provided with no VOCs detected.

4-5) SGS provided results from two full suite solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the VOC analyses. All LCS recoveries were within laboratory specified control limits, ranging from 68 to 122 percent (various control limits). Accuracy, as demonstrated by these analyses is acceptable.

6-7) SGS provided results from two sets of solid matrix batch specific matrix spike (MS) analyses in support of the VOC analyses. MS recoveries ranged from 41 to 120 percent (various control limits). All MS recoveries were in control with the following exceptions. MS recoveries associated with samples GRID-1 and GRID-2 were low for the following VOCs by 1 to 7 percent;

1,1,2,2-Tetrachloroethane, cis-1,3-Dichloropropene, and trans-1,3-Dichloropropene

No action is taken for the minimally low recoveries reported in the batch spike.

8) Four surrogates were spiked into each soil sample in support of the VOC analyses. Surrogate recoveries were acceptable, ranging from 88 to 104 percent (various control limits). Accuracy, as demonstrated by these analyses is acceptable.

9) Field duplicate samples were not collected with the samples under this chain of custody.

A laboratory duplicate analysis was performed on another client's sample. Precision was poor for 2-butanone with an RPD of 50 percent (upper control of 15 percent). No action is taken, as the butanone detections were within a reporting limit RL increment of each other.

.

10) Results were reported on a dry weight basis. Tentatively Identified Compounds (TICs) were evaluated for each sample with no compounds identified. It was noted that the CCV for dichlorodifluoromethane associated with VOC samples GRID-1 and GRID-2 was low. Similarly, the CCV for acetone associated with the remaining VOC samples was low. SGS noted that a sensitivity check was analyzed to demonstrate system suitability to detect dichlorodifluoromethane and acetone in the associated samples. Therefore no action is taken.

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) Samples were collected on November 26, 2024. The soil samples were extracted on December 6, 2024 within the required 14-day holding time. SVOC analyses were performed by December 6, 2024 within the 40 day holding time after extraction. Extraction and analysis holding times were met.

2) No sample dilutions were required for analysis of SVOCs. Several SVOCs were detected in soil samples at concentrations between the method detection limit (MDL) and the reporting limit. **Due to limited accuracy in this portion of the calibration range these SVOCs results are qualified as J/Estimated, as noted in the following pages:**

Sample ID	**Qualified SVOCs (ug/kg)**
GRID-29	Carbazole = 10.9 *J*
GRID-29	bis(2-Ethylhexyl)phthalate = 11.8 *J*
GRID-30	Carbazole = 20.1 *J*
GRID-31	1,1'-Biphenyl = 7.8 *J*
GRID-31	Carbazole = 52.7 *J*
GRID-31	Dibenzofuran = 35.8 *J*
GRID-31	Di-n-butyl phthalate = 10.8 *J*

Sample ID	Qualified SVOCs (ug/kg)
GRID-31	bis(2-Ethylhexyl)phthalate = 31.1 *J*
GRID-31	Naphthalene = 22.1 *J*
GRID-32	Acenaphthene = 13.5 *J*
GRID-32	Acenaphthylene = 30.5 *J*
GRID-32	1,1'-Biphenyl = 5.9 *J*
GRID-32	Carbazole = 18.8 *J*
GRID-32	Di-n-butyl phthalate = 6.6 *J*
GRID-32	bis(2-Ethylhexyl)phthalate = 30.5 *J*
GRID-32	Fluorene = 26.5 *J*
GRID-32	Naphthalene = 11.2 *J*
GRID-33	Acenaphthene = 29.4 *J*
GRID-33	Acetophenone = 8.1 *J*
GRID-33	Butyl benzyl phthalate = 11.1 *J*
GRID-33	Benzaldehyde = 8.9 *J*
GRID-33	Carbazole = 59.1 *J*
GRID-33	Dibenzofuran = 17.5 *J*
GRID-33	bis(2-Ethylhexyl)phthalate = 13.9 *J*
GRID-33	Fluorene = 35.9 *J*
GRID-33	2-Methylnaphthalene = 12.5 *J*
GRID-33	Naphthalene = 30.3 *J*
GRID-34	1,1'-Biphenyl = 8.3 *J*
GRID-34	Carbazole = 52.9 *J*
GRID-34	Dibenzofuran = 52.5 *J*
GRID-34	2-Methylnaphthalene = 14.5 *J*
GRID-34	Naphthalene = 22.6 *J*
GRID-35	Acenaphthene = 22.4 *J*
GRID-35	Carbazole = 23.3 *J*
GRID-35	Fluorene = 22.4 *J*
GRID-35	2-Methylnaphthalene = 8.4 *J*
GRID-35	Naphthalene = 15.2 *J*
GRID-36	Benzo(k)fluoranthene = 28.0 *J*
GRID-36	Carbazole = 15.4 *J*
GRID-36	bis(2-Ethylhexyl)phthalate = 13.8 *J*
GRID-36	Indeno(1,2,3-cd)pyrene = 30.1 *J*

3) SGS provided results from one full suite solid matrix method blank in support of the SVOC analyses. No SVOCs were detected in the method blank.

4-5) SGS provided results from one full set of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the SVOC analyses. All LCS recoveries were within laboratory specified control limits, ranging from 28 to 74 percent (various control limits). Accuracy, as demonstrated by these analyses is acceptable.

6-7) SGS provided results from one set of project specific (spike on sample GRID-32) matrix spike (MS) and MSD duplicate analyses in support of the SVOC analyses. MS and MSD recoveries ranged from 6 to 101 percent (various control limits). The maximum RPD between MS and MSD results was 39 percent. Precision and accuracy, as demonstrated by these analyses is acceptable, with the following exceptions. **MS/MSD recoveries were low for 2,4-Dinitrophenol, 4,6-Dinitro-o-cresol, and Hexachlorocyclopentadiene, with recoveries of less than 10 percent. These SVOC were not detected in the sample spiked. Due to the low MS recoveries, the SVOCs are qualified as "UJ/Estimated and non-detect at the reporting limits stated"**

8) Six surrogates were spiked into each soil sample in support of the SVOC analyses. Surrogate recoveries were acceptable, ranging from 36 to 80 percent (various control limits). Accuracy, as demonstrated by these analyses is acceptable.

9) Field duplicate samples were not collected with the samples under this chain of custody.

.

10) Results were reported on a dry weight basis. Numerous Tentatively Identified Compounds (TICs) were reported with each sample analyzed for SVOCs. Results for TICs are considered to be estimated in magnitude. In some cases, the identification of the TIC was verified against the library of SVOCs compounds associated with the method.

%R - percent recovery RPD - relative percent difference CCV – continuing calibration verification

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) Samples were collected on November 26, 2024. The soil samples for analysis of pesticides were extracted on December 6, 2024 within the required 14-day holding time. Pesticide analyses were performed by December 11, 2024 within the 40-day holding time after extraction.

2) No samples were analyzed at dilutions. Some pesticides were detected in soil samples at concentrations between the method detection limit (MDL) and the reporting limit. **Due to limited accuracy in this portion of the calibration range these pesticide results are qualified as J/Estimated, as follows:**

Sample ID	**Qualified Pesticides (ug/kg)**
GRID-29	Heptachlor epoxide = 0.30 ***J***
GRID-30	Dieldrin = 0.13 ***J***
GRID-31	alpha-BHC = 0.16 *J*
GRID-31	Endosulfan-II = 0.16 *J*
GRID-31	Heptachlor= 0.37 *J*
GRID-34	Dieldrin = 0.32 ***J***

Sample ID	Qualified Pesticides (ug/kg)
GRID-36	gamma-Chlordane = 0.23 *J*
GRID-36	Dieldrin = 0.18 *J*
GRID-36	4,4-DDD = 0.27 *J*
GRID-36	Heptachlor epoxide = 0.23 *J*

3) SGS provided results from one full suite solid matrix method blank in support of the pesticide analyses. No pesticides were detected in the method blank.

4-5) SGS provided results from one full set solid matrix laboratory control sample (LCS) analysis (identified as blank spike analyses) in support of the pesticide analyses. All LCS recoveries were within laboratory specified control limits, ranging from 78 to 118 percent, with one exception. The LCS recovery for methoxychlor is high at 118 percent (upper control limit of 111 percent).

Methoxychlor was not detected in the associated samples and no bias to the sample results is indicated.

6-7) SGS provided results from one set of batch specific matrix spike (MS) and MSD duplicate analyses in support of the pesticide analyses. MS and MSD recoveries ranged from 77 to 521 percent, with a maximum RPD between MS and MSD results of 38 percent. Numerous pesticides have MS recoveries that are out of control and biased high. The pesticides include:

4,4'-DDD	4,4'-DDT	alpha-Chlordane	Chlordane (alpha and gamma),
Endosulfan sulfate		Endrin aldehyde	gamma-Chlordane
Heptachlor epoxide		Methoxychlor.	

No action is taken based on the high MS recoveries in the batch spike, as the matrix may not be representative of the project samples.

8) Two surrogates (tetrachloro-m-xylene and decachlorobiphenyl) were spiked into each soil sample in support of the solid matrix pesticide analyses. Surrogates were reported from each of the two columns used in the analyses. Surrogate recoveries range from 43 to 519 % percent (control limits for TCMX = 46 to 145% and 29-163% for DBCP). Several DCBP surrogate recoveries are out of control and high. Pesticides detections from the analytical column where the pesticides were quantified can be found in the GC Identification Summary section of the SGS report. **Based on this review, the following pesticides are qualified as J/Estimated due to the high surrogate recoveries.**

Sample ID	High DCBP % Rec	Impacted Pesticides
GRID-33	112 / **263**	alpha-Chlordane, Heptachlor epoxide
GRID-34	100 / **470**	alpha-Chlordane, Heptachlor epoxide, 44-DDE
GRID-35	**172 / 519**	All pesticides detected
GRID-36	112 / **211**	None

9) Several sets of DDT/Endrin breakdown check standards were analyzed coinciding with each analytical batch. DDT and Endrin breakdown levels were all less than the QAPP specific level of 15 percent.

10) Field duplicate samples were not collected with the samples under this chain of custody.

11) Results were reported on a dry weight basis. No anomalies were noted with respect to results pesticide quantitation or reporting, with the following exceptions. Numerous pesticides were flagged by SGS due to an RPD of more than 40% between the dual GC columns used for quantitation and confirmation. This criterion is not addressed in the project QAPP. Some of these results may already be qualified as J/Estimated due to reporting limits. The following results are qualified due to poor column confirmation precision.

Sample ID	**Qualified Pesticides (ug/kg)**
GRID-29	alpha-Chlordane, 4,4-DDD
GRID-30	alpha and gamma-Chlordane, Dieldrin, 4,4-DDD, 4,4-DDT
GRID-31	alpha-Chlordane, Endosulfan-II, Heptachlor epoxide
GRID-32	alpha-Chlordane, Heptachlor epoxide
GRID-33	Dieldrin , 4,4-DDD, 4,4-DDT
GRID-34	gamma-Chlordane. Dieldrin , 4,4-DDD,
GRID-35	alpha-Chlordane, Dieldrin, 4,4-DDT, Heptachlor epoxide
GRID-36	gamma-Chlordane. Dieldrin , 4,4-DDD, 4,4-DDT

%R - percent recovery RPD - relative percent difference CCV – continuing calibration verification

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) Samples were collected on November 26, 2024. The soil samples for analysis of Aroclors were extracted on December 6, 2024 within the required 14-day holding time. Aroclor analyses were performed by December 10, 2024, within the 40 day holding time after extraction. Extraction and analysis holding times were met.

2) No soil samples were analyzed at dilutions to quantitate any Aroclors. Some Aroclor detections were reported at concentrations between the MDL and RL. **Due to limited accuracy in this portion of the calibration range these Aroclor results are qualified as J/Estimated, as noted in the following pages:**

Sample ID	**Qualified SVOCs (ug/kg)**
GRID-31	Aroclor 1260 = 16.0 *J*
GRID-33	Aroclor 1262 = 5.9 *J*
GRID-35	Aroclor 1262 = 7.2 *J*

Aroclor reporting limits are determined to be acceptable.

3) SGS provided results from one full suite solid matrix method blank in support of the Aroclor analyses with no Aroclors detected.

4-5) SGS provided results from one set of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the Aroclor analyses.

Aroclors 1016 and 1260 were spiked with acceptable recoveries of 100 and 118 percent (various control limits). Accuracy, as demonstrated by these analyses is acceptable.

6-7) SGS provided results from one set of batch specific matrix spike (MS) and MSD duplicate analyses in support of the Aroclor analyses. MS spikes were performed on Aroclors 1016 and 1260. MS and MSD recoveries ranged from 121 to 129 percent and were within prescribed control limits. Precision between MS and MSD results was acceptable, with a maximum RPD of 5 percent.

8) Two surrogates (tetrachloro-m-xylene and decachlorobiphenyl) were spiked into each soil sample in support of the solid matrix Aroclor analyses. Surrogate recoveries were reported from both analytical columns and ranged from 89 to 139 percent. Accuracy, as demonstrated by these analyses is acceptable.

9) Field duplicate samples were not collected with the samples under this chain of custody.

10) Results were reported on a dry weight basis. No anomalies were noted with respect to results for Aroclor quantitation or reporting.

COMMENTS: Performance was acceptable, with the following exceptions and/or notes:

1) Samples were collected on November 26, 2024. The soil samples for analysis of TAL metals were prepared by December 3, 2024 and were analyzed within the 6 month holding times by December 3, 2024 (within 28 days for mercury). Extraction and analysis holding times were met.

2) No metal analyses were performed at dilutions. All metals results were reported to the RL. No metals detections were reported at concentrations between the MDL and RL. Reporting limits are determined to be acceptable.

3) Results from numerous sets of initial and continuing calibration blanks were provided in support of the TAL metals analyses. Results for these blanks were presented in aqueous units. No TAL metals were detected at concentrations exceeding the RL. Results from one set of solid matrix method blanks were also provided, with no metals detected at concentrations exceeding the RL.

4) Results from several sets of initial and continuing calibration analyses were provided for the TAL metals. All ICV and CCV standard recoveries were within control limits of 90-110 percent. Results from high end (typically 8,000 ug/L) calibration standards were provided with acceptable recoveries between 90 and 110 percent. Results from

low end calibration standards (CRI) were also reported and acceptable. CRI control limits are 80-120 percent.

5) Results from several sets of ICP interference check samples were provided in support of the TAL metals. ICP interference check sample recoveries were acceptable, within control limits of 80-20 percent.

6-7) SGS provided results from one set of solid matrix batch specific matrix spike (MS) and MSD duplicate analyses in support of the TAL metals analyses. MS and MSD recoveries are evaluated herein when the sample concentration in the native sample does not exceed the spike concentration by more than 4 times. MS and MSD control limits were 75 – 125 percent. All MS recoveries were in control with the following exceptions.

MS/MSD recoveries were out of control limits in the batch spike as follows:

Metal spiked	MS / MSD Recovery %	Validation Action
Antimony	62.3 / 61.2	Low bias – UJ/Estimated at RL

Antimony was not detected in any samples. All antimony result are qualified as "UJ/Estimated and non-detect at the reporting limits stated."

8) SGS provided results from one set of solid matrix LCS analyses in support of the TAL metals is soil samples. The LCS recoveries were acceptable ranging from 87.0 to 96.5 percent (control limits of 80-120 percent).

9) SGS provide results from one set of serial dilution analyses performed on a batch sample. Percent differences between the initial result and the 5 times serial dilution result were less the control limit of 10 percent for all metals results where the initial result was greater than 50 times the instrument detection limit, with the following exceptions. Percent difference for aluminum, calcium, and iron were all between 10 and 11 percent. **No action is taken based on the slightly poor serial dilution precision for these metals demonstrated by the batch sample.**

10) Field duplicate samples were not collected with the samples under this chain of custody.

11) No anomalies were noted with respect to the metals reporting.

%R - percent recovery RPD - relative percent difference

COMMENTS: Performance was acceptable, with the following exceptions and/or notes:

1) Samples were collected on November 26, 2024. The soil samples for analysis of cyanide were analyzed by December 5, 2024 within the required 14 day holding time.

2) No dilutions were required to quantitate results for the cyanide.

3) Results from two solid matrix method blanks were provided in support of the cyanide, with no cyanide detected.

4) Results from initial and continuing calibration analyses for cyanide were acceptable, with recoveries between 90 and 110 percent.

5-6) SGS provided results from one batch specific and from one project sample specific (GRID-36) set of matrix spike (MS) analyses in support of the cyanide analyses. The cyanide MS recovery on sample GRID-36 was very low at 10.4 percent. The batch spike recovery was acceptable at 113.9 percent. **Due to the low MS recovery on the project sample, all cyanide results for this SDG are qualified as "UJ/Estimated and non-detect at the reporting limits stated."**

7) SGS provided results from two solid matrix LCS analyses in support of the soil sample analyses for cyanide. The LCS recoveries were acceptable, at 108.5 percent, each.

8) SGS provided results from batch specific and one project specific (sample GRID-36) laboratory duplicates. Precision between duplicate results was acceptable for cyanide, with no cyanide detected in any of the samples.

Field duplicate samples were not submitted under this chain of custody.

9) Results were reported on a dry weight basis. No anomalies were noted with respect to the cyanide reporting.

RIDGEWOOD BERM SOIL SAMPLING
VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JE1536 DATED DECEMBER 23, 2024

Matrix New World Engineering (Matrix) collected eight soil samples on November 26, 2024. The sample results have been validated in accordance with the Project QAPP requirements, guidance from the National Functional Guidelines for Organic and Inorganic data Review and professional judgment of the data reviewer.

The QC information evaluated has been described in the preceding pages. Based on this review, data provided for the soil samples collected are determined to be quantitative, with the exceptions noted in the following table.

Sample Identification(s) / Analyte(s)	Data Qualifier(s)	Reason(s) For Qualification
SVOCs All Samples / SVOC detections noted pages 4 and 5 of this validation report.	J/Estimated	These SVOCs were reported at concentrations between the method detection limit and the reporting limit. Accuracy in this portion of the calibration curve may be limited.
SVOCs GRID-32 / 2,4-Dinitrophenol, 4,6-Dinitro-o-cresol, and Hexachlorocyclopentadiene,	UJ/Estimated and non-detect at the reporting limits stated	A project specific MS/MSD was performed on this sample. Spike recoveries for the SVOCs listed were below control limits and less than 10 percent. The ability to detect these SVOCs in questionable in the sample spiked.
SVOCs All samples / Tentatively Identified Compounds (TICs)	J/Estimated	Numerous TICs were reported with each sample analyzed for SVOCs. Results for TICs are considered to be estimated in magnitude. In some cases, the identification of the TIC was verified against the library of SVOCs compounds associated with the method.
Pesticides All Samples / Pesticide detections noted on pages 7 and 8 of this validation report.	J/Estimated	These pesticides were reported at concentrations between the method detection limit and the reporting limit. Accuracy in this portion of the calibration curve may be limited.
GRID-33 / alpha-Chlordane, Heptachlor epoxide GRID-34 / alpha-Chlordane, Heptachlor epoxide, 4,4-DDE GRID-35 /**All pesticides detected**	J/Estimated	Associated DCBP surrogate recovery is high in one or both columns were the sample quantification was made. Detection noted may be biased high.

Sample Identification(s) / Analyte(s)	Data Qualifier(s)	Reason(s) For Qualification
Pesticides GRID-29 / alpha-Chlordane, 4,4-DDD GRID-30 / alpha and gamma-Chlordane, Dieldrin, 4,4-DDD, 4,4-DDT GRID-31 /alpha-Chlordane, Endosulfan-II, Heptachlor epoxide GRID-32 / alpha-Chlordane, Heptachlor epoxide GRID-33 / Dieldrin , 4,4-DDD, 4,4-DDT GRID-34 / gamma-Chlordane. Dieldrin , 4,4-DDD, GRID-35 / alpha-Chlordane, Dieldrin, 4,4-DDT, Heptachlor epoxide GRID-36 / gamma-Chlordane. Dieldrin, 4,4-DDD, 4,4-DDT	J/Estimated	Poor precision between results of dual column confirmation for the samples and detections noted. RPDs exceed 40 percent between columns.
Aroclors GRID-31 / Aroclor 1260 GRID-33 / Aroclor 1262 GRID-35 / Aroclor 1262	J/Estimated	These Aroclors were reported at concentrations between the method detection limit and the reporting limit. Accuracy in this portion of the calibration curve may be limited.
TAL Metals All soil samples / Antimony	"UJ/Estimated and non-detect at the reporting limits stated" for antimony NDs	MS and MSD recoveries for antimony were low in a batch MS/MSD. Antimony was not detected in any samples. Sample results for the antimony may be biased low.
Cyanide All soil samples	"UJ/Estimated and non-detect at the reporting limits stated" for antimony NDs	Project MS recovery for cyanide was low at 10.4 percent. The ability to detect cyanide in the project sample matrix in questionable.

RIDGEWOOD BERM SAMPLING
VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JE1542 DATED DECEMBER 23, 2024

INTRODUCTION

Matrix New World Engineering (Matrix) collected 11 soil samples and one field duplicate sample on November 26, 2024. Samples were relinquished to an SGS Laboratory courier, and then transported to SGS Laboratory, located in Dayton, New Jersey. Samples were received at SGS on November 26, 2024 at an acceptable temperature of 2.7 degrees Celsius. Sample identifications and requested analyses are listed below. Several samples were extracted and placed on hold, pending the results of the initial analyses. If the hold analyses were performed, these analyses are noted in **bold** in the following table, discussed in the following pages, and are validated as applicable.

Matrix Sample ID	**Lab Sample ID**	**Analyses Requested and Methods**		**Initial Status / Comment**
GRID-20R	JE1542-1		TCL Pesticides	Hold
GRID-20R	JE1542-1R		TCL Pesticides	**Analyzed**
GRID-20 (2.0-2.5)	JE1542-2	BAP and BAA by EPA Method 8270E

10. Results Quantitation		X		X	

%R - percent recovery RPD - relative percent difference CCV – continuing calibration verification

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) Samples were collected on November 26, 2024. The "non-hold" soil samples were extracted on December 6, 2024 within the required 14-day holding time, and were analyzed by December 9, 2024 within holding time.. Samples initially placed on hold were extracted on December 16, 2024 past 14-day holding time. These samples were analyzed within the 40-day hold time after extraction one December 17, 2024.

Due to the exceeded holding time before extraction, results for the following samples are qualified as J/Estimated for detections and "UJ/Estimated and non-detect at the reporting limits stated" for non-detects.

GRID-20 (2.5-3.0) GRID-20-N2 GRID-20-S2 GRID-20-E2 GRID-20-W2

All other extraction and analysis holding times were met.

2) Sample GRID-20-N1 was diluted by a factor of 10 times. Samples GRID-20-S1, GRID-20-W1, and DUP-4 were diluted by factors of 5 times. No other sample dilutions were required for analysis of benzo(a)anthracene or benzo(a)pyrene. No target analytes were detected at concentrations between the method detection limit (MDL) and the reporting

limit (RL). All reporting limits are determined to be acceptable.

3) SGS provided results from two solid matrix method blanks in support of the Benzo(a)anthracene or Benzo(a)pyrene analyses. These SVOCs were not detected in the method blanks.

.

4-5) SGS provided results from two sets of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the benzo(a)anthracene and benzo(a)pyrene analyses. LCS recoveries were within laboratory specified control limits, ranging from 65 to 69 percent. Accuracy, as demonstrated by these analyses is acceptable.

6-7) SGS provided results from two sets of batch specific matrix spike (MS) and MS duplicate analyses in support of the benzo(a)anthracene and benzo(a)pyrene analyses. MS and MSD recoveries for the samples extracted within holding times were acceptable at 73 to 92 percent.

The batch spike associated with the samples extracted past holding times has low MS and MSD recoveries with negative recoveries. No action is taken, as the sample spiked had very high target compound concentrations, and is not considered to be relevant to the Matrix samples.

.

8) Three surrogates were spiked into each soil sample in support of the benzo(a)anthracene and benzo(a)pyrene analyses. Surrogate recoveries ranged from 48 to 88 percent, and were within prescribed control limits for initial and dilution analyses.

9) Sample DUP-4 was submitted as a blind field duplicate of primary sample GRID-20-W1

Results of the field duplicate sampling are presented below for any benzo(a)anthracene or benzo(a)pyrene detected. All results are in presented in units of ug/Kg.

Sample ID	Benzo(a)pyrene	Benzo(a)anthracene
DUP-004	5,500	4,750
GRID-20-W1	7,520	6,740
RPD (%)	31	35

Soil sample field duplicate precision is evaluated based on an acceptable RPD of 50 percent or less. Based on these criteria, field duplicate precision is determined to be acceptable.

10) All results were reported on a dry weight basis. No anomalies were noted with respect to results quantitation or reporting for the two target SVOC compounds.

COMMENTS: Performance was acceptable, with the following exceptions and/or notes.

1) Samples were collected on November 26, 2024. The soil sample for analysis of pesticides was extracted on December 6, 2024 within the required 14-day holding time. Pesticide analyses were performed by December 7, 2024 within the 40-day holding time after extraction.

2) No samples were analyzed at dilutions to quantify specific pesticides. No pesticides were detected in the soil sample at concentrations between the method detection limit (MDL) and the reporting limit.

3) SGS provided results from one full suite solid matrix method blank in support of the pesticide analyses. No Pesticides were detected in the method blank.

4-5) SGS provided results from one full set of solid matrix laboratory control sample (LCS) analyses (identified as blank spike analyses) in support of the pesticide analyses. LCS recoveries were within laboratory specified control limits, ranging from 78 to 118 percent, with one exception. The LCS recovery for methoxychlor was high at 118 percent (upper control limit of 111 percent). No action is taken, as methoxychlor was not detected in the associated soil sample. Remaining accuracy, as demonstrated by these analyses is acceptable.

6-7) SGS provided results from one set of batch specific matrix spike (MS) and MS duplicate analyses in support of the pesticide analyses. MS and MSD recoveries ranged from 77 to 521 percent. The maximum RPD between MS and MSD results was high at 38 percent. MS or MSD recoveries were high for nearly half of the pesticide target compounds. No validation action is taken for the batch spike, as the matrix may not be representative of the project samples collected.

8) Two surrogates (tetrachloro-m-xylene and decachlorobiphenyl) were spiked into each soil sample in support of the solid matrix pesticide analyses. Surrogates were reported from each of the two columns used in the analyses. Surrogate recoveries ranged from 104 to 197 percent. For sample GRID-20R, decachlorobiphenyl surrogate recoveries were high from both analytical columns at 188 and 197 percent (upper control limit of 163 percent). Due to the high surrogate recoveries, associated pesticide detections may be bias. **Results for the following detected pesticides are qualified as J/Estimated due to the high surrogate recoveries.**

alpha-Chlordane	gamma-Chlordane	Chlordane
4,4-DDT	4,4-DDE	Endosulfan-I

9) Several sets of DDT/Endrin breakdown check standards were analyzed coinciding with each analytical batch. DDT and Endrin breakdown levels were all less than the QAPP specific level of 15 percent.

10) Two sets of field duplicate samples were submitted in the initial sample submittal. These samples were not selected for field duplicate analysis of pesticides.

11) All results were reported on a dry weight basis. No anomalies were noted with respect to results pesticide quantitation or reporting, with the following exceptions. The CCV for methoxychlor was high. Methoxychlor was not detected in the associated sample and no bias is indicated.

Some pesticides were flagged by SGS due to an RPD of more than 40% between the dual GC columns used for quantitation and confirmation. In many cases, the pesticides in question were also qualified as J/Estimated due to reporting limits. The following samples results and are qualified due to poor precision between pesticide detections on the dual columns.

Sample ID	Qualified pesticides (ug/Kg)
GRID-20R	4,4-DDE = 1.5 *J*

RIDGEWOOD BERM SAMPLING
VALIDATION OF LABORATORY RESULTS
SGS LABORATORY (DAYTON, NJ)

LABORATORY REPORT # JE1542 DATED DECEMBER 23, 2024

Matrix New World Engineering (Matrix) collected 11 soil samples and one field duplicate sample on November 26, 2024. The sample results have been validated in accordance with the Project QAPP requirements, guidance from the National Functional Guidelines for Organic data Review, and professional judgment of the data reviewer.

The QC information evaluated has been described in the preceding pages. Based on this review, data provided for the soil samples collected are determined to be quantitative, with the exceptions noted in the following table.

Sample Identification(s) / Analyte(s)	Data Qualifier(s)	Reason(s) For Qualification
SVOCs GRID-20 (2.5-3.0) / Benzo(a)pyrene GRID-20-N2 / Benzo(a)pyrene and Benzo(a)anthracene GRID-20-S2/ Benzo(a)pyrene and Benzo(a)anthracene GRID-20-E2 // Benzo(a)pyrene GRID-20-W2/ Benzo(a)pyrene and Benzo(a)anthracene	J/Estimated	Samples were extracted past the allowable 14-day holding times. Results may be biased low due to missed holding time before extraction.
Pesticides GRID-20R / alpha-Chlordane, gamma-Chlordane, Chlordane, 4,4-DDT , 4,4-DDE, and Endosulfan-I	J/Estimated	Associated DCBP surrogate recoveries were high from both analytical signals. Sample results may be biased high.
Pesticides GRID-20R / 4,4-DDE	J/Estimated	Precision between results of dual analytical columns was poor, with an RPD greater than 40 percent.

VALIDATION PERFORMED BY: **William W. Huskie, Consulting Geochemist**

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Matrix New World Engineering, Inc.	**Job No:**	JE1296
Site:	Ridgewood Berm Sampling, Ridgewood, NJ	**Report Date**	12/5/2024 6:41:30 AM

On 11/21/2024, 16 sample(s), 0 Trip Blank(s), 0 Equip. Blank(s) and 1 Field Blank(s) were received at SGS North America Inc. (SGS) at a temperature of 4.1 °C. The samples were intact and properly preserved, unless noted below. An SGS Job Number of JE1296 was assigned to the project. The lab sample ID, client sample ID, and date of sample collection are detailed in the report's Results Summary.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** V2S289

- All samples were analyzed within the recommended method holding time.
- Sample(s) JE1160-1MS, JE1160-2DUP, JE1160-1MS were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- The blank spike (BS) recovery(s) of Bromodichloromethane, Benzene, Trichloroethene are outside control limits.
- The matrix spike (MS) recovery(s) of 1,1,1-Trichloroethane, 1,3-Dichlorobenzene, Bromoform, Carbon tetrachloride, cis-1,3-Dichloropropene, Dibromochloromethane, Tetrachloroethene, trans-1,3-Dichloropropene, Trichlorofluoromethane, Bromodichloromethane are outside control limits. Outside control limits due to matrix interference.
- The duplicate RPD(s) for cis-1,2-Dichloroethene are outside control limits for sample JE1160-2DUP. High RPD due to low concentration of hit
- V2S289-BS for Benzene: Outside of in house control limits, but within reasonable method recovery limits.
- V2S289-BS for Trichloroethene: Outside of in house control limits, but within the marginal exceedance limits.
- JE1160-1MS for Bromodichloromethane: Outside in house control limits.
- JE1296-12 for Bromoform: Associated CCV outside of control limits high, sample was ND.
- JE1296-12 for Bromodichloromethane: This compound in blank spike is outside in house QC limits bias high.
- JE1296-12 for Bromomethane: Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.
- V2S289-BS for Bromodichloromethane: High percent recovery and no associated positive reported in the QC batch.

MS Semi-volatiles By Method SW846 8270E

Matrix: AQ **Batch ID:** OP59717

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- JE1296-12 for 2,4-Dinitrophenol: Associated CCV outside of control limits high, sample was ND.
- JE1296-12 for 3,3'-Dichlorobenzidine: Associated CCV outside of control limits high, sample was ND.
- JE1296-12 for 4,6-Dinitro-o-cresol: Associated CCV outside of control limits high, sample was ND.
- JE1296-12 for Hexachlorocyclopentadiene: Associated CCV outside of control limits high, sample was ND.

Matrix: SO **Batch ID:** OP59724

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- Sample(s) JE1296-2MS, JE1296-2MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE1296-20, JE1296-28, JE1296-34 have surrogates outside control limits. Surrogate recovery marginally exceeded the lower statistical limit.
- OP59724-MB1 for Nitrobenzene-d5: Outside control limits. Associated analytes not needed in the client sample.
- JE1296-20 for 2-Fluorobiphenyl: Outside of control limits, but within reasonable method recovery limits.
- JE1296-20 for Terphenyl-d14: Outside of control limits, but within reasonable method recovery limits.
- JE1296-34 for Nitrobenzene-d5: Outside control limits. Associated analytes not needed in the client sample.

GC/LC Semi-volatiles By Method SW846 8081B

Matrix: AQ **Batch ID:** OP59697

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

GC/LC Semi-volatiles By Method SW846 8082A

Matrix: AQ **Batch ID:** OP59698

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

Metals Analysis By Method SW846 6010D

Matrix: AQ **Batch ID:** MP51147

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE1240-2MS, JE1240-2MSD, JE1240-2SDL were used as the QC samples for the metals analysis.
- The serial dilution RPD(s) for Copper, Antimony, Cobalt, Nickel, Potassium, Silver, Zinc are outside control limits for sample MP51147-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MP51147-SD1 for Zinc: Serial dilution indicates possible matrix interference.
- MP51147-MB1 for Copper: All reported results >10x MB value or with RL> 2X of this value.

Metals Analysis By Method SW846 7470A

Matrix:	AQ	Batch ID:	MP51190

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE1208-1MS, JE1208-1MSD were used as the QC samples for the metals analysis.

General Chemistry By Method EPA 335.4/LACHAT

Matrix:	AQ	Batch ID:	GP58048

- All samples were prepared within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) LB8635-1DUP, LB8635-1MS were used as the QC samples for the Cyanide analysis.

General Chemistry By Method SM2540 G 18TH ED MOD

Matrix:	SO	Batch ID:	GN62591

- Sample(s) JE1278-8DUP were used as the QC samples for the Solids, Percent analysis.

Matrix:	SO	Batch ID:	GN62592

- Sample(s) JE1051-6DUP were used as the QC samples for the Solids, Percent analysis.
- The duplicate RPD(s) for Solids, Percent are outside control limits for sample GN62592-D1. Probable cause due to sample homogeneity.

SGS certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting SGS's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. This report is authorized by SGS indicated via signature on the report cover.

SGS Sample Receipt Summary

Job Number: JE1296 **Client:** MATRIX NEW WORLD ENGINEERING, IN **Project:** RIDGEWOOD BERM SAMPLING, RIDGE

Date / Time Received: 11/21/2024 6:31:00 PM **Delivery Method:** COURIER **Airbill #'s:**

Cooler Temps (Raw Measured) °C: Cooler 1: (3.7); Cooler 2: (3.1);

Cooler Temps (Corrected) °C: Cooler 1: (4.1); Cooler 2: (3.5);

Cooler Security	Y	or	N		Y	or	N
1. Custody Seals Present:	☑		☐	3. COC Present:	☑		☐
2. Custody Seals Intact:	☑		☐	4. Smpl Dates/Time OK	☑		☐

Cooler Temperature	Y	or	N
1. Temp criteria achieved:	☑		☐
2. Cooler temp verification:	IR-50		
3. Cooler media:	Ice (Bag)		
4. No. Coolers:	2		

Quality Control Preservation	Y	or	N	N/A
1. Trip Blank present / cooler:	☐		☑	☐
2. Trip Blank listed on COC:	☐		☑	☐
3. Samples preserved properly:	☑		☐	
4. VOCs headspace free:	☑		☐	☐

Sample Integrity - Documentation	Y	or	N
1. Sample labels present on bottles:	☑		☐
2. Container labeling complete:	☑		☐
3. Sample container label / COC agree:	☑		☐

Sample Integrity - Condition	Y	or	N
1. Sample recvd within HT:	☑		☐
2. All containers accounted for:	☑		☐
3. Condition of sample:	Intact		

Sample Integrity - Instructions	Y	or	N	N/A
1. Analysis requested is clear:	☑		☐	
2. Bottles received for unspecified tests	☐		☑	
3. Sufficient volume recvd for analysis:	☑		☐	
4. Compositing instructions clear:	☐		☐	☑
5. Filtering instructions clear:	☐		☐	☑

Test Strip Lot #s: pH 1-12: 231619 pH 12+: 203117A Other: (Specify)

Sample Summary

Matrix New World Engineering, Inc.

Job No: JE1296R

Ridgewood Berm Sampling, Ridgewood, NJ
Project No: 23-1429; PO#20243716

Sample Number	Collected Date	Time	By	Received	Matrix Code	Matrix Type	Client Sample ID
JE1296-1R	11/21/24	09:30	DC	11/21/24	SO	Soil	GRID-26R
JE1296-13R	11/21/24	11:55	DC	11/21/24	SO	Soil	GRID-28R
JE1296-25R	11/21/24	13:20	DC	11/21/24	SO	Soil	GRID-16R
JE1296-37R	11/21/24	15:15	DC	11/21/24	SO	Soil	GRID-18R

This report contains results reported as ND = Not detected. The following applies:
Organics ND = Not detected above the MDL

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Matrix New World Engineering, Inc.	**Job No:**	JE1296R
Site:	Ridgewood Berm Sampling, Ridgewood, NJ	**Report Date**	12/12/2024 7:06:55 A

On 11/21/2024, 4 sample(s), 0 Trip Blank(s), 0 Equip. Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. (SGS) at a temperature of 4.1 °C. The samples were intact and properly preserved, unless noted below. An SGS Job Number of JE1296R was assigned to the project. The lab sample ID, client sample ID, and date of sample collection are detailed in the report's Results Summary.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

GC/LC Semi-volatiles By Method SW846 8081B

Matrix: SO **Batch ID:** OP59833

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE1300-9QMS, JE1300-9QMSD were used as the QC samples indicated.
- The matrix spike (MS) recovery(s) of 4,4'-DDT, Endosulfan-I are outside in house control limits.
- The matrix spike duplicate (MSD) recovery(s) of 4,4'-DDT, Endosulfan-I, gamma-Chlordane are outside in house control limits.
- Matrix Spike/Matrix Spike Duplicate recovery(s) of 4,4'-DDE, Chlordane (alpha and gamma), alpha-Chlordane, Heptachlor epoxide are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- JE1296-1R for alpha-Chlordane: More than 40 % RPD for detected concentrations between the two GC columns.

Matrix: SO **Batch ID:** OP59852

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE1037-1MS, JE1037-1MSD were used as the QC samples indicated.
- JE1296-37R for Decachlorobiphenyl: Outside of in house control limits.
- OP59852-BS1 for Endrin ketone: Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
- JE1296-13R for alpha-Chlordane: More than 40 % RPD for detected concentrations between the two GC columns.
- JE1296-13R for Dieldrin: More than 40 % RPD for detected concentrations between the two GC columns.
- JE1296-13R for Endosulfan-II: More than 40 % RPD for detected concentrations between the two GC columns.
- JE1296-13R for Heptachlor epoxide: More than 40 % RPD for detected concentrations between the two GC columns.
- JE1296-25R for Decachlorobiphenyl: Outside of in house control limits.

General Chemistry By Method SM2540 G 18TH ED MOD

Matrix: SO **Batch ID:** GN62813

- Sample(s) JE1296-1RDUP were used as the QC samples for the Solids, Percent analysis.

SGS certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting SGS's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. This report is authorized by SGS indicated via signature on the report cover.

DDT/Endrin Breakdown Check

Job Number: JE1296R
Account: MTXFPNJ Matrix New World Engineering, Inc.
Project: Ridgewood Berm Sampling, Ridgewood, NJ

Sample:	G8G2700-DDT	**Injection Date:**	12/03/24
Lab File ID:	8G62762.D	**Injection Time:**	00:19
Instrument ID:	GC8G		

Compound	Response Signal 1	Response Signal 2
4,4'-DDD	13352496	45252466
4,4'-DDE	723064	2850969
4,4'-DDT	657954260	1067635809
DDT Breakdown [a]	2.1 %	4.3 %
Endrin aldehyde	877688	5876817
Endrin ketone	7141980	13027832
Endrin	347533700	630312279
Endrin Breakdown [b]	2.3 %	2.9 %

(a) Calculated as: (DDD + DDE) / (DDD + DDE + DDT) x 100
(b) Calculated as: (Endrin Aldehyde + Endrin Ketone) / (Endrin Aldehyde + Endrin Ketone + Endrin) x 100

This check applies to the following Samples, MS, MSD, Blanks, and Standards:

Lab Sample ID	Lab File ID	Date Analyzed	Time Analyzed	Hours Lapsed	Client Sample ID
G8G2700-CC2596	8G62764.D	12/03/24	01:07	00:48	Continuing cal 5
OP59820-MB1	8G62766.D	12/03/24	01:55	01:36	Method Blank

Manual Integration Approval Summary

Sample Number: OP59852-BS1
Lab FileID: 8G62848.D
Injection Time: 12/04/24 16:36
Method: SW846 8081B
Analyst approved: 12/05/24 01:09 Christopher Changho
Supervisor approved: 12/05/24 08:41 Gwendolyn Burns

Parameter	CAS	Sig#	R.T. (min.)	Reason
Tetrachloro-m-xylene	877-09-8	1	2.96	Poorly defined baseline
gamma-BHC (Lindane)	58-89-9	1	3.76	Poorly defined baseline
Heptachlor	76-44-8	1	4.29	Poorly defined baseline
Alachlor	15972-60-8	1	4.80	Poorly defined baseline
gamma-BHC (Lindane)	58-89-9	2	4.87	Poorly defined baseline
beta-BHC	319-85-7	2	4.96	Poorly defined baseline
delta-BHC	319-86-8	2	5.40	Poorly defined baseline
Heptachlor epoxide	1024-57-3	1	5.42	Poorly defined baseline
Alachlor	15972-60-8	2	5.78	Poorly defined baseline
Endrin aldehyde	7421-93-4	1	7.66	Poorly defined baseline
4,4'-DDT	50-29-3	2	9.28	Poorly defined baseline
Endrin aldehyde	7421-93-4	2	9.52	Poorly defined baseline
Methoxychlor	72-43-5	2	10.51	Poorly defined baseline
Decachlorobiphenyl	2051-24-3	1	10.61	Poorly defined baseline
Mirex	2385-85-5	2	10.94	Poorly defined baseline
Endrin ketone	53494-70-5	2	10.97	Poorly defined baseline
Decachlorobiphenyl	2051-24-3	2	12.99	Poorly defined baseline

Manual Integration Approval Summary

Sample Number: OP59852-MSD
Lab FileID: 8G62850.D
Injection Time: 12/04/24 17:26
Method: SW846 8081B
Analyst approved: 12/05/24 01:09 Christopher Changho
Supervisor approved: 12/05/24 08:41 Gwendolyn Burns

Parameter	CAS	Sig#	R.T. (min.)	Reason
Tetrachloro-m-xylene	877-09-8	1	2.96	Poorly defined baseline
Heptachlor	76-44-8	1	4.29	Poorly defined baseline
Alachlor	15972-60-8	1	4.79	Poorly defined baseline
delta-BHC	319-86-8	2	5.40	Poorly defined baseline
Endosulfan-I	959-98-8	1	5.97	Poorly defined baseline
4,4'-DDD	72-54-8	1	6.77	Poorly defined baseline
Endrin aldehyde	7421-93-4	1	7.66	Poorly defined baseline
Methoxychlor	72-43-5	1	8.00	Poorly defined baseline
Dieldrin	60-57-1	2	8.04	Poorly defined baseline
Mirex	2385-85-5	1	8.20	Poorly defined baseline
Methoxychlor	72-43-5	2	10.51	Poorly defined baseline
Decachlorobiphenyl	2051-24-3	1	10.61	Poorly defined baseline
Mirex	2385-85-5	2	10.94	Poorly defined baseline
Endrin ketone	53494-70-5	2	10.97	Poorly defined baseline
